

The ONLY horizontal sliding fire-door with these unique features:

- Spans unlimited widths, heights up to 23 feet
- Meets fire codes without being seen
- Approved for egress applications
- Automatic closing and electronically supervised
- Optional locking and security hardware
- Virtually maintenance free
- 20, 60, 90 and 180 minute UL listed fire-door assembly
- Accepted by all model building codes

PROJECT: OFFICE DESIGN

IMAGINE WHAT **you** COULD DO WITH A **fire-door** THAT'S ALSO A **security door**

- Vertical Opening Protective
- Area Separation/Fire Wall
- Occupancy Separation
- Atrium Separation
- Corridor Separation
- Elevator Lobby Separation
- Horizontal Exits
- Smoke & Draft Control
- Smoke Barrier
- Safe Areas of Refuge

Call a Fire-Door Specialist today. 1-800-453-8494

WON-DOOR CORPORATION

PROJECT: OFFICES

Choosing a fire-door that provides fire safety, building security and allows design flexibility simply makes good business sense.

VERTICAL OPENING PROTECTIVE

A savvy architect chose Won-Door FireGuard fire-doors to protect this multi-story atrium built around a reflecting pool. By using code provisions for **shaft enclosures** rather than atrium separation the architect was looking out for his client's bottom line.

ELEVATOR LOBBY SEPARATION

The UL listed Won-Door FireGuard horizontal sliding fire-door is accepted by all the model building codes as a **means of egress** and may be used to protect the entrance to a tenant suite, even when that suite opens onto a fire-rated corridor.

COMMUNICATING STAIRWELL

Installed in the open position at both ends of the stairway, Won-Door FireGuard fire-doors close automatically when activated by the smoke alarm, making them an acceptable – and much less obtrusive – alternative to traditional swinging fire-doors as a **vertical opening protective**.

WIDE SPAN OPENING PROTECTIVE

The ceiling height in **subterranean parking structures** is usually determined by the clearance necessary for the housing for a vertical roll-down door. Use of the horizontal sliding Won-Door FireGuard fire-door can yield dramatic savings in subterranean excavation costs, as well as the cost of materials.

BUILDING SECURITY

Advanced Synchronized Locking software can protect your entire facility from smoke and fire damage as well as from breaches of security when used with Won-Door FireGuard fire-doors and SteelCurtain deployable access control barriers.

QUALITY AND SERVICE

The Won-Door team of specialists makes sure that things go smoothly every step of the way - from order to installation.

- **Won-Door sales representatives** are located throughout the United States – and around the world. They are up-to-date on all the recent changes to the model building codes and can help you find the solutions that are right for your project
- **Draftsmen and engineers** provide technical support as you prepare your bid package, helping to simplify your task of meeting code requirements and creating design layouts
- **Factory trained installers** make sure your doors are installed correctly for each application

Call today to schedule a PowerPoint Presentation luncheon for your office. It takes about an hour and can be tailored to your specific project or interests. In addition to acquainting you with the many uses of the Won-Door FireGuard, you'll gain valuable AIA credits through Won-Door's "Continuing Education Program" (AIA/CES approved for LH&S learning units).

For more information or to have your local representative call you, simply fill out the response card below and put it in the mail.

1-800-453-8494

WON-DOOR CORPORATION

PROJECT: CASINO DESIGN

With a little imagination and the very versatile Won-Door FireGuard, odds are you'll be drawing a winning plan.

OCCUPANCY SEPARATION

This specially-made 33 foot* high Won-Door FireGuard fire-door was the only way to make this architect's plan to join the main casino area and the retail space – without visual interruption – and satisfy **mixed use occupancy** requirements a reality.

* standard heights to 23 feet

VERTICAL OPENING PROTECTIVE

Even curved openings can be accommodated. This **vertical opening protective** at the Aladdin Hotel and Casino in Las Vegas actually consists of four Won-Door FireGuard fire-doors that completely enclose the 360 degree second level of the rotunda.

SHAFT ENCLOSURE

This fire-door completes the picture above and satisfies **vertical opening protection** as well as **occupancy separation** requirements by sealing off the escalator from the rotunda retail shops and the main casino level.

ELEVATOR LOBBY SEPARATION

Architects of the Aladdin Hotel and Casino installed the automatic closing Won-Door FireGuard system on each floor throughout the hotel tower, satisfying **elevator lobby separation** requirements.

AREA SEPARATION

The fire-rated opening between the Primm Outlet Mall and the main casino level in Las Vegas is more than 50 feet wide and 25 feet high. The Won-Door FireGuard system is used to satisfying **wide span opening** and **occupancy separation** requirements.

QUALITY AND SERVICE

The Won-Door team of specialists makes sure that things go smoothly every step of the way - from order to installation.

WON-DOOR CORPORATION

PROJECT: SCHOOLS

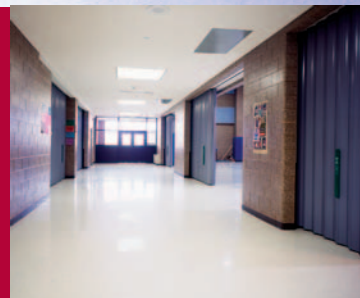

Won-Door FireGuard fire-doors are recessed in wall pockets which means unobstructed hallways and less chance of damage or vandalism.

AREA SEPARATION/FIRE WALL

The Won-Door FireGuard fire-door is the only horizontal sliding fire-door that complies with all current model fire codes in all jurisdictions for use as a **means of egress**.

SMOKE AND DRAFT CONTROL

In the past, traditional swinging fire-doors were used to separate otherwise unobstructed corridors in order to meet code requirements in schools. **Spanning corridors** can now be easily accomplished with the Won-Door FireGuard fire-door assembly.

OCCUPANCY SEPARATION

Architects were able to satisfy **occupancy separation** requirements – in this case separation of the food preparation areas from the commons area – by specifying a Won-Door FireGuard assembly. Doors fold completely out of sight when not in use.

STAGE PROSCENIUM

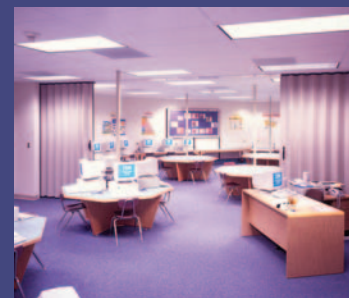

Stage proscenium openings can also be protected by Won-Door's FireGuard accordion fire-door. These large openings create unique situations where **wide span protection** is required. Doors are operated by a motor drive and close automatically in a fire emergency situation.

ACOUSTICALLY RATED PARTITIONS

The acoustically rated DuraSound partition provides superior **sound control** and **durability**. DuraSound, specially designed for high use facilities, can be used to subdivide classrooms, creating additional teaching spaces.

QUALITY AND SERVICE

The Won-Door team of specialists makes sure that things go smoothly every step of the way - from order to installation.

- **Won-Door sales representatives** are located throughout the United States – and around the world. They are up-to-date on all the recent changes to the model building codes and can help you find the solutions that are right for your project

1-800-453-8494

WON-DOOR CORPORATION

PROJECT: AIRPORTS

The ability to compartmentalize space – to isolate and control an incident with minimal impact on the rest of the terminal – is an important part of airport security.

AREA SEPARATION/FIRE WALL

The Won-Door FireGuard fire-door is the only horizontal sliding fire-door that complies with all current model fire codes in all jurisdictions for use as a **means of egress**.

VERTICAL OPENING PROTECTIVE

Won-Door FireGuard fire-doors were installed at each end of the escalators in the Orlando International Airport to satisfy **protection of vertical penetration** requirements. Even curved openings can be accommodated.

NON-RATED GLASS ENTRANCE

Floor to ceiling glass panels can be used at an entrance even when it opens onto a fire-rated corridor – if it is protected by a Won-Door FireGuard fire-door. The U.L. listed Won-Door FireGuard is permitted in a **means of egress** by all model building codes.

PEDESTRIAN WALKWAYS

All model building codes require a one-hour fire resistive separation between walkways or tunnels and the connecting buildings. This **horizontal exit** is effectively accomplished with the Won-Door FireGuard fire-door.

ACCESS CONTROL

The Won-Door FireGuard fire-door was successfully used in Burbank International Airport to isolate and control a **security breach** while in the rest of the terminal it was business as usual.

QUALITY AND SERVICE

The Won-Door team of specialists makes sure that things go smoothly every step of the way - from order to installation.

- **Won-Door sales representatives** are located throughout the United States – and around the world. They are up-to-date on all the recent changes to the model building codes and can help you find the solutions that are right for your project

WON-DOOR CORPORATION

PROJECT: ASSISTED LIVING

Won-Door FireGuard fire-doors are designed to accommodate the efficient movement and egress of nonambulatory individuals.

ATRIUM SEPARATION

The Won-Door FireGuard fire-door is the only horizontal sliding fire-door that complies with all current model fire codes pertaining to **atrium separation**. And, use of the Won-Door FireGuard rather than traditional fire-doors will often reduce construction costs.

SHAFT ENCLOSURE

Wide, unobstructed corridors; open foyers and improved sightlines – details that facilitate residents' mobility – can make code compliance a challenge. The architect specified the Won-Door FireGuard fire-door to protect this **wide span opening** leading to a communicating staircase.

ELEVATOR LOBBY SEPARATION

The U.L. listed Won-Door FireGuard horizontal sliding fire-door is accepted by all the model building codes as a means of egress and may be used for **elevator lobby separation** as well as "S" labeled for **smoke and toxic fume containment**.

NON-RATED GLASS PANELS

A non-rated glass assembly can be used even when it opens onto a fire-rated corridor... if it is protected by a Won-Door FireGuard fire-door. The Won-Door FireGuard is accepted for use as a **means of egress** by all model building codes.

AREA SEPARATION

A Won-Door accordion fire-door used as a **cross corridor area separation** can allow for unrestricted corridor openings. The Won-Door FireGuard fire-door meets the needs of all building occupants, including the disabled, for access and egress.

QUALITY AND SERVICE

The Won-Door team of specialists makes sure that things go smoothly every step of the way - from order to installation.
