

## The Country Estate Patented Gate Socket . . . Never Underestimate The Value Of A Great Gate!

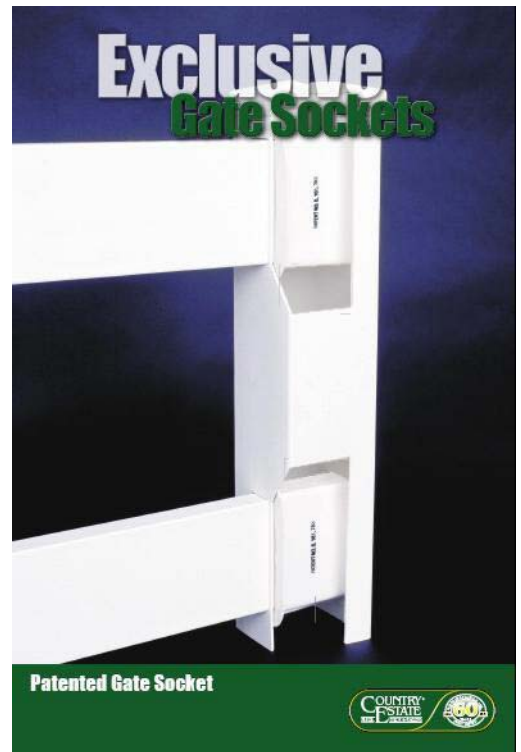

The patented Country Estate gate socket was designed to provide rigidity to PVC gates. The socket fits tightly into a hollow PVC post and is positioned over each routed hole in a gate post. It is cemented to the inner walls of the post, and due to its structural design, provides rigidity to the horizontal gate rails, which are eventually cemented and secured in the sockets with screws, after being inserted into the sockets when the gate is assembled.
