

GATE OPERATORS AND ACCESS CONTROLS

Thinking Beyond Your Perimeter

Gated communities. Private residences. Businesses of all sizes. At every entrance and every point of access, we provide the products that meet your specifications, with the style, convenience and safety your customers demand – all from one source.

LiftMaster®

Gate Access Systems

LiftMaster® and Elite® gate operators and telephone entry systems touch the lives of millions of people each day as they come and go from both home and office. In fact, no other supplier offers you the ability to specify a complete commercial and residential access system... all from a single source.

Systems That Work Together Seamlessly

Need to power a gate or control a point of access? Start with the gate operator. We offer three different styles: slide, swing, and barrier. All slide and swing operators offer the ability to incorporate special features including AC or DC power, as well as solar power. Barrier gates provide synchronized operation with slide or swing gates and provide the highest level of security and anti-tailgating functionality. And our entire product line features operators designed for applications requiring continuous operation and high security, as well as for gates weighing up to 5,000 lbs.

Next, add access control devices and voice-enabled systems to put maximum control in the hands of residents and property managers. Whether it's a telephone entry system, wireless keypad, card reader or handheld access device, you can depend on us to have the right solution for your unique application.

Multi-Site Control

LiftMaster Q™ Site Control Solutions, a new integrated access system offering complete and secure property control, is ideal for situations ranging from facilities requiring complex access levels to simple access demands spread over multiple locations making it ideal for apartment buildings, business campuses, military bases and educational facilities. LiftMaster Q™ has the ability to distinguish 10,000 unique users and up to 20,000 credentials and codes.

LiftMaster®

Gate Access Systems

Through Connectivity, Compatibility And Control, We Are Expanding The Capabilities For Access And Communication For Homes And Businesses.

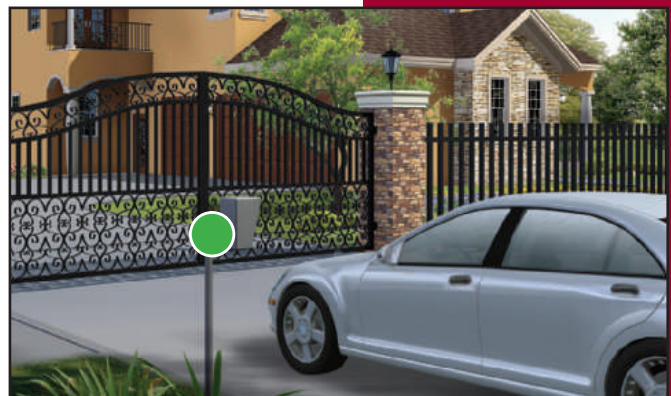

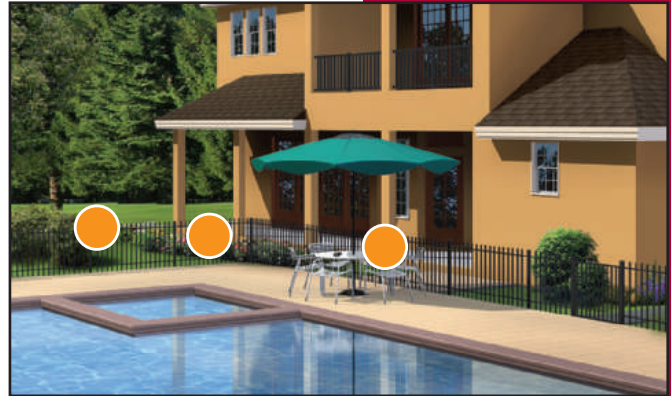

Making Wireless Access and Communication Easier

Welcome to the expanding world of integrated access.

Now the company that offers access products that power gates, fences and garage doors has added a fully compatible wireless access and communication system that thinks the same way.

LiftMaster® Wireless Access and Communication suite of products.

The LiftMaster Wireless Access and Communication product line is offered in three key categories - Gate and Door Access Controls, Communication Controls and Relay Activation - to support an entire system designed to work in concert with each other and enable complete customizing of property access and communication systems effortlessly and securely. All systems are incredibly easy to install and operate.
