NanaWall®
The Leader in Opening Glass Walls 

Inspiration and passion for sophisticated residential design are reflected in homes created by architects who choose the NanaWall, large opening glass wall system.

The NanaWall is a unique solution that provides constant options for open air living or weathertight comfort in today's elegant homes. The secure shelter of the closed NanaWall transforms to breathtaking, unobstructed wide open space in moments. Indoor-outdoor boundaries vanish, living space expands, and broad vistas or quiet gardens become an integrated part of the home.

NanaWall embraces the values of today's cutting edge architecture. The NanaWall is engineered for energy efficiency from environmentally friendly materials. A NanaWall incorporates sustainable design features such as natural lighting and ventilation into every project in which it is featured. In addition, concealed hardware, maximised glass area, and a single floor track create clean, unobstructed architectural lines

Over 20 years of experience plus stringent independent testing insures that the NanaWall meets the most challenging architectural specifications. Custom made systems are available with wood, aluminum, or clad frames in hundreds of colors and finishes. Custom sizes, configurations, hardware, and glazing provide the designer with inspiration to create one-of-a-kind openings that enhance any project.

We invite you into the world of NanaWall. In these pages you will view architectural projects designed by innovative architects who have used the NanaWall to blur the lines between the landscape and the living space. Open up to the possibilities!

“A home does not stand separate from it’s surrounding. The concept of a Not So Big House requires the careful design of the transitions between interior and exterior. Moveable glass wall systems effortlessly create larger or smaller “rooms” as needed, and allow the most efficient use of available space. You get two completely different spatial experiences, depending upon whether the wall system is open, or closed, and to experience the difference between the two is nothing short of amazing.

Sarah Susanka, FAIA
 Author, Architect & Cultural Visionary

Newport, Rhode Island, Pool Cabana

“We chose the NanaWall for this pool cabana because it was the only folding door system that offered the flexibility that we needed to create a completely outdoor space during good weather and a functional and cozy space overlooking the pool and ocean views when the weather is not so nice.”

Upstate New York Barn

“We wanted to maintain the historic integrity of this 19th century barn, but traditional windows limited our ability to bring in the outdoors. Using Nana Wall, we were able to juxtapose the old barn wood and modern openings to create a multi-purpose recreation space.”

"I first used the Nanawall in my personal home. We liked the more formal look of the door system compared to a sliding glass door, with the ability to have even more of the room open to the outdoors..... Since then I have had clients appreciate the look and functionality of the doors and have asked that I incorporate them in their homes....."

"For several years I searched for a product that could withstand the harsh winters of the Midwest. After seeing the NanaWall in Northern California on a vacation I found exactly what I was looking for. I designed a system on my own home and couldn't be happier. Since then I have used the NanaWall on numerous projects. My clients love how it opens up their living to the outdoors."

Sleeping Porch Bedroom

“When commissioned to design the typically pragmatic master bedroom addition, we decided to use what little programmatic area we were given to its fullest poetic advantage, a “more with less” approach. By lifting the addition on pilotis, the new bedroom is aligned with the former bedroom, creating a master suite. The terrace created beneath this addition provides shaded rest for the users of the pool and bocce ball court nearby. Folding open the large window wall (NanaWall) allows the custom bed to track out onto the elevated terrace—bringing the indoors out—permitting comfortable nights spent under the moon and stars.”

"The NanaWall allows the client to fully join the treehouse screen porch with the living space. The southeast breezes are pulled from the outside all the way through the main floor of the house, making for balmy, bug-free evenings much of the year. Effectively, the NanaWall doubles the size of the living room and imparts a sense of spaciousness that would otherwise be unattainable."

Texas Stone Barn Ranch

“The old hay-loft of this 40’s barn was converted to the living, dining and kitchen area of this home. The NanaWall System allowed us to open the room into this new three-story screened porch with connecting catwalk over to the studio/office building. The wall actually stays open most of the year, and the air conditioning system is seldom on. The screened room between the two stone buildings acts like the traditional ‘dog trot’ buildings to increase the (passive cooling) air flow through the space.”

"When we designed this home we envisioned a resort type atmosphere. We chose the NanaWall to allow the client to experience a wide open indoor/outdoor luxury lifestyle – taking full advantage of the pool/spa and lake views beyond. We also chose NanaWall because it is a structurally sound system that provides unlimited design configurations. We feel NanaWall is the Mercedes of moveable glass wall systems."

“We chose the NanaWall because of its clean lines, ease in operation and single handle locking system. We liked the concept so much we decided to use 5 separate NanaWalls in our last Seattle Street of Dreams Home. By using the NanaWall with its low threshold and combining it with similar floor tile inside and out we were able to disguise the division between the outdoors and inside of our home. This look created one of the “WOW” factors of our home.”

Cannery Lofts

Builder's Choice Award 2005:
Project of the Year

"The decision to use NanaWall was made by the developer very early in the process and was one we strongly supported. The NanaWall was a logical choice for the Cannery Lofts. The NanaWall allows the living spaces to embrace the California condition, i.e., seamlessly connecting the indoor living rooms with outdoor living rooms. Along with the aesthetic merits of the product the technical staff was very helpful in developing a system that was appropriate to the marine environment. The NanaWall met the aesthetic, technical, and quality requirements that the Cannery Lofts demanded."

“Architecture ventures to fulfill a client’s requirements —functionality, aesthetics, and something more elusive...connectedness. This is accomplished by the creation of dynamic spaces which allow the senses to roam, and heighten the human experience, encouraging creativity, imagination, and well-being. The NanaWall allows this flexibility; evidenced by the visceral response from all who witness the wall opening and the magical transformation of space. In the case of this project, I was my own client, so I hear the oos and aahs every time someone comes over.”
