

# DAYLIGHT YOUR INTERIORS WITH DRAPER WINDOW SHADES!

Draper FlexShades are available in a wide variety of fabrics to complement and protect the indoor environment. Choose the color, design, and opacity to meet your needs. Fabrics by Phifer and 3G Mermet, as well as Draper's own materials.

# Benefits of Solar Control with Draper Window Shades

- **Indoor Air Quality:** Choose fabrics with GREENGUARD® Children & Schools™ certification, which meet the strictest off-gassing standards. These materials are certified by GREENGUARD® as not only low-emitting products, but as contributors to a safer and healthier indoor environment for school age children.
- **Daylight and Glare:** By choosing the correct fabric, you can maximize the daylight while managing the glare. Ask for our case study on Heifer International, a LEED® Platinum certified facility where Draper shades successfully addressed an unexpected problem with solar glare.

- **Conserve Energy:** Light colors at the windows effectively reflect heat, reducing the solar heat gain. Ask for our case study on fabric openness and energy conservation.

- **Innovative approaches:** Choose a duplex fabric to maximize energy conservation and glare control at the same time. Place the darker color to the interior to improve the view, and the lighter color outside to conserve energy. Or ask about Infinity, a new fabric from Phifer that is 100% recyclable.
