GATED COMMUNITIES

Planned community residents prefer automated gate systems to help reduce vehicular traffic and control access to their neighborhoods. Access control with the same credential (coded card, digital code, biometric, etc.) is used to allow entry through the gates, and also allows access into and within the community, and easily control access to common areas such as pools, workout rooms, laundry rooms, etc.

For guest control, DKS telephone entry systems provide communication to the resident's home. Once the guest is identified, the resident can easily grant or deny access by simply pressing a button on their touch-tone telephone.

RESIDENTIAL

DKS access control systems provide homeowners with superior products, security, and safety – controlling access into their property.

For single family homes, the model 1812 allows the homeowner to use their telephone as an intercom, and provides communication and control of the front gate.

In gated communities, our telephone entry and access control systems control all traffic, both pedestrian and vehicular, into and within the community. By use of coded cards or wireless devices, residents of the community are assured that only they have access to the pool, tennis courts, recreation facilities, or other restricted areas.

APARTMENT AND COLLEGE RESIDENT HALLS

DKS telephone entry and telephone intercom systems control access into and within a building, and provides communication for guests to identify themselves to the resident.

Our unique telephone intercom system works whether the resident has Central Office phone service or not. We also provide a "call down" feature.

By using DKS coded wireless devices, users and administrators are assured that only authorized persons have access to secured areas.

SELF STORAGE

DKS has complete turn-key self storage solutions to help manage your property – from gate operators to access control to management software. DKS vehicular gate operators and access control systems allow only those persons/vehicles with the proper credentials to gain access to your facility – automatically!

Symbio software is the complete management and access control solution featuring a graphical site map, tenant management, billing management, reporting management, daily task manager and more. Available for single or multiple facilities, and an unlimited number of units.

PARKING CONTROL

Whether it's a single parking lot or a multi-floor parking structure, DoorKing can help control access, manage traffic flow, reduce costs and increase revenue.

For simple single lane traffic control, to more serious control DKS provides single barrier arms to automated spike systems and a full line of accessories: warning signs, stop/go signals, heater and fan kits, and a full line of slide and swing gate operators. Our 1150 model is designed for overhead type gates providing full gate automation in a minimum amount of space.

MIXED USE BUILDINGS

The blending of public and private sectors creates unique challenges when controlling access into and within these buildings. DoorKing's access controllers and management software starts right at the front door and lets you decide the "who, when, and where" in your building.

From a complex parking/access control system, to even a simple single door requirement, DKS systems can give you control of all traffic – both pedestrian and vehicular – into and within your building. Residents and administrators are assured that only authorized persons have access to private areas.

COMMERCIAL INDUSTRIAL BUSINESSES

When it is imperative that employers do everything they can to protect their employees and guests, and to keep unauthorized persons from entering – DKS access control systems provide business owners and managers with superior products, security and safety.

Control all traffic (both pedestrian and vehicular) into and within the business property and common areas. From the front gate and parking areas, to within the buildings and elevators, DKS access control hardware and software lets you decide the “who, when and where” of access control.

MAXIMUM SECURITY

For security sensitive areas such as airports, military installations, industrial sites, sea ports, infrastructure facilities (chemical, electrical, water treatment plants, etc.), DKS maximum security gate operators offer special features like partial open, anti-tail gating, variable speed control, the choice of a manual control station or automated access control devices, access control software that keeps a detailed record of all events, and that’s not all! Several models available for a variety of gate sizes and travel speeds - and other features.

DKS gate operators and access control systems – seamless integration with a level of perimeter security and control that your application demands.

60 Years

Based in Inglewood, California since it's founding in 1948, DoorKing operates from six buildings encompassing approximately 70,000 square feet of space and is located less than 3-miles from Los Angeles International Airport (LAX). These buildings include our corporate headquarters, manufacturing, engineering, sales, marketing, and customer service offices, as well as more than 8000 square feet of warehouse space dedicated to finished products to insure fast delivery. In addition to our corporate complex, we operate regional sales offices in New Jersey, Florida, Georgia, California, Texas, Mississippi, Illinois, Washington, and Arizona.
