Custom-designed to fit the exact specifications of your orchestra pit, STRATA Orchestra Pit Filler installs quickly and easily with a small crew. It provides incredibly strong support while it frees up an amazing amount of space below because of our innovative column-beam design. Our acoustically dampening decks fit snugly against your existing stage to create an integrated surface that is extremely quiet.

### DECKS
STRATA decks lock to the substructure with a simple hex wrench connection. Each deck is isolated from other decks to eliminate rubbing and potential noise generation.

### CROSS BEAMS
Cross beams attach to the main beam with a quick tube-and-socket connection—and no tools. This tremendous flexibility ensures an ideal fit even in applications with a difficult-to-match wall radius.

### MAIN BEAMS
Main beams connect to your stage front with a simple bracket to ensure a seamless connection with the permanent stage.

### DIAGONAL BRACING
Braces are bolted to main beams and cross beams to eliminate loose parts and speed setup. Braces from each beam attach to columns with quick-release pins.

### COLUMNS
Columns connect to the main beam with a quick-release pin. This smart, simple system makes switching lengths of columns—or the height of your entire pit filler—faster and easier than ever.

### CROSS BEAMS
Cross beams attach to the main beam with a quick tube-and-socket connection—and no tools. This tremendous flexibility ensures an ideal fit even in applications with a difficult-to-match wall radius.

### LEVELING FEET
Leveling feet on all columns.

Diva reflects sound back to the source so musicians can hear themselves more accurately. For conductors, Diva delivers a more accurate mix of sounds from the entire orchestra. By reflecting and diffusing sound throughout the enclosure, Diva enhances cross-communication vital to ensemble performance.

Diva projects sound into the audience and prevents sound energy from escaping into the fly loft, curtains, and stage wings.

**DIVA GIVES YOU THE TOOLS TO CREATE THE LOOK YOU WANT.**
You can choose from a vast selection of hardwood veneers, laminates, paint finishes, and accents that allow you to enhance any decor and complement any architecture.

**DIVA® PAYS ITS WAY WITH SUBSTANCE, STYLE, AND EASE.**
Diva’s composite-panel construction provides superior acoustical performance and Diva’s ability to produce custom aesthetics at a lower cost is a Wenger exclusive. We also think you’ll see that Diva is engineered and built to a higher standard. The all-aluminum frame provides longer-lasting rigidity and easy operation. Diva also gives you the unique advantages of the Air Transporter, which allows one person to move Diva towers on a cushion of air. Setup time and crew size are slashed, and there’s less wear and tear on the shell itself – and on your stage floor.

**MAGNIFICENT ACOUSTICS • BREATHTAKING AESTHETICS**

The first goal of the acoustical shell is to improve the acoustical environment on stage. Diva is the beneficiary of decades of pioneering work by Wenger, and we believe Diva’s acoustical qualities are the finest available. Diva’s integrated ceiling panels prevent sound from escaping into the stage fly loft. Diva also projects sound into the audience and, compared to using no shell, Diva has the acoustical impact of almost doubling the size of the group. You can add Wenger ceiling clouds and acoustical panels to the auditorium to give your audience the ultimate level of acoustic excellence.

**BETTER SOUND REWARDS YOU WITH BETTER PERFORMANCES.**

The Diva shell’s big advantage is the acoustic environment it creates, helping students become critical listeners. They’re learning to respond to what they’re hearing and the audience overwhelmingly hears the difference too.

“The Diva shell finishes the appearance of the auditorium very beautifully. Wenger matched the shell’s veneer to the warm cherry wood interior panels, giving a really nice, unified look.”

- Robert Palmer
Chairman of Performing Arts
Avon Old Farms School
Avon, Connecticut

“Diva’s composite-panel construction provides superior acoustical performance and Diva’s ability to produce custom aesthetics at a lower cost is a Wenger exclusive. **MAGNIFICENT ACOUSTICS • BREATHTAKING AESTHETICS**
“Without the shell, sound just goes completely into the rafters – it’s very obvious. The shell makes a sizable difference in containing the sound and projecting it out to the audience rather than up into the ceiling. Whether onstage or in the audience, you can really tell the shell’s benefits.”

Dan Baker
Choir Director & Music Department Chair
Northridge High School
Middlebury, Indiana

“Acoustically the Diva shell makes a world of difference. We can hear everything beautifully – it’s amazing! The shell looks great too, coordinating nicely with the Diva panels in the seating area. It’s the perfect package.”

Luis Martinez
Band Director
Booker T. Washington High School for the Performing and Visual Arts
Dallas, Texas

“Awesome versatility — Smart economics — Lasting value

STANDARD DIVA ADVANTAGES.

- Composite panel construction
- Extensive finish options allow you to achieve virtually any look within any budget range
- Finish trim strips accent the shell finish
- Ceiling panels, with optional integrated lighting, deploy directly from stage rigging
- Stage access doors are quiet and convenient and can accommodate a grand piano
- Air Transporter moves towers on a cushion of air
- All-aluminum frame is rigid, durable, economical, and easy to maneuver
- Nesting wall tower design saves storage space
- Tower leveling pads make it easy to fine-tune your Diva presentation
- Counter-weighted base stabilizes towers and maintains balance during setup/strike
- Inherent design flexibility and economies allow you to achieve a custom aesthetic appearance within virtually any budget range
- Preset ceiling panel angle positioners eliminate guesswork and speed setup
- Telescoping wing stays position wing panels and lock them in place
- Counter-weighted base stabilizes towers and maintains balance during setup/strike
- Inherent design flexibility and economies allow you to achieve a custom aesthetic appearance within virtually any budget range
- Preset ceiling panel angle positioners eliminate guesswork and speed setup
- Telescoping wing stays position wing panels and lock them in place

Awesomely versatile, Diva adapts to your budget.

Every auditorium and theater is different, physically and aesthetically, as is every budget. Accommodating these variables is what Diva does better than any other shell. We’ll help you modify your Diva system to fit your space, your aesthetics, and your budget. You can also be assured that every Diva shell is built to the same superior standards and each operates with a special brand of Wengler ease. Thanks to quality materials and incomparable construction methods, Diva will maintain its structural integrity and magnificent looks years after other shells show the effects of time. Diva durability gives you long-term added value, as well as a beautiful centerpiece for your stage that projects an ongoing image of excellence.

ALUMINUM FRAME WITH MAINTENANCE-FREE HINGES.
Diva’s extruded aluminum structural frame is extremely rigid and keeps Diva panels aligned for the finest visual appearance. The lightweight aluminum design also promotes easy operation and provides key economies.

Composite-panel/honeycomb-core construction creates an acoustically reflective surface that excels across a broad range of frequencies.

Convenient, quiet stage access doors make it fast and easy to move people on and off stage. Double doors can accommodate grand pianos.

Ceiling panels attach to stage rigging and are available with optional lighting. Diva’s integral aluminum trusses incorporate electrical raceways.
**BEAUTIFUL CUSTOMIZATIONS • INTERNATIONAL EXPERIENCE**

**CUSTOM DIVA OPTIONS.**
- Custom-shaped ceiling and wall panels
- High-density panels
- Adjustable acoustically transparent panels
- Acoustical tower shelves
- Flat and curved panel combinations
- Forestage reflector/diffuser

**ACOUSTICS**
- Custom-shaped ceiling and wall panels
- High-density panels
- Adjustable acoustically transparent panels
- Acoustical tower shelves
- Flat and curved panel combinations
- Forestage reflector/diffuser

**AESTHETICS/DESIGN**
- Wood veneer finishes
- Field-applied faux finishes
- Panels with custom shapes/radius
- Accents, inlaid features, and other architectural enhancements

**STORAGE**
- Towers with folding bases
- Towers flown for storage
- Removable top tower sections
- Removable ceiling sections
- Ceiling storage carts
- Float ceiling storage carts
- Float or attached rear wall

**ACOUSTICS**
- Custom-shaped ceiling and wall panels
- High-density panels
- Adjustable acoustically transparent panels
- Acoustical tower shelves
- Flat and curved panel combinations
- Forestage reflector/diffuser

**AESTHETICS/DESIGN**
- Wood veneer finishes
- Field-applied faux finishes
- Panels with custom shapes/radius
- Accents, inlaid features, and other architectural enhancements

**STORAGE**
- Towers with folding bases
- Towers flown for storage
- Removable top tower sections
- Removable ceiling sections
- Ceiling storage carts
- Float ceiling storage carts
- Float or attached rear wall

**CUSTOM DIVA OPTIONS.**
- Tunable panels use flat, curved, and acoustically transparent panels to meet specific acoustical needs
- Tower shelves enhance cross-stage hearing for musicians and folds for compact storage
- Removable tower top sections allow access to storage areas with lower ceiling heights

---

“We’ve worked with Wenger on other unusual shells; they very much have a can-do attitude and offer creative solutions. I like how they roll up their sleeves and get into the spirit of what we’re trying to accomplish, even if it’s something they’ve never done before. The Diva shell fits all the right criteria for the Carpenter Theatre, including portability and affordability. We needed a flexible shell that could be moved on and off stage, with the ability to park and route the towers.”

Bruce Herrmann, AIA, Director, Wilson Butler Architects
Boston, Massachusetts

“The Diva shell helps create the best acoustic environment for the musicians, enabling them to do their jobs in a better, easier way. If musicians can hear each other, they can play together as a more unified group. That’s been my experience with Diva shells at two different facilities. The Diva’s flexibility definitely gives us different options for setting up the orchestra. The Diva probably uses the Diva two or three times per year on a variety of events.”

Laura Bordner Adams, Director of Orchestral Operations, Richmond Symphony Orchestra
Richmond, Virginia

**DIVA IS THE RIGHT PLATFORM FOR ANY CUSTOM SHELL.**

We’ve designed Diva to accommodate any customization required for your project. Our designers work with your project team to create the shell that is perfect for your facility. Diva design and aesthetics accommodate everything from historic theatres to the most modern architecture. Acoustical requirements for specific spaces and mass can all be met with the Diva platform. Acoustical shell storage is of paramount concern for all facilities and Wenger has a long history of solving shell storage challenges—everything from folding tower bases to flying walls and removable ceilings.

**CUSTOM DIVA ACOUSTIC SHELLS THAT FIT YOUR BUDGET.**

Our years of experience in designing custom acoustic shells offers your project team the ability to create a shell as unique as your facility and fit within your budget. Wenger offers a design-build approach to satisfying your most stringent aesthetic, acoustic or storage requirements. Our designers are here to collaborate with you to create the perfect shell and add value-engineered solutions while controlling costs.
EXCLUSIVE AIR TRANSPORTER REDEFINES ‘CONVENIENCE’.

This revolutionary feature moves Diva towers on a cushion of air for easy, one-person operation that also protects your stage floor. It’s simple to use: Just push a button and the Air Transporter does the work for you.

DIVA® OWNERS KNOW — DIVA’S EFFICIENCIES ARE PRICELESS.

Engineering excellence is a Wenger hallmark, and Diva may be our finest example. The ingenious design, built with the highest-quality materials and hardware, operates in a unique manner that is one of Diva’s greatest attributes. You’ll need fewer people and less time to set and strike the shell because Diva is so easy to operate and so stable and secure. That’s also why you’ll be likely to use and reconfigure it more often. Diva is designed and built to last.

“T’m a big proponent of the Diva system. I think it’s easy to deploy; we deploy it at least twice a month, sometime more. Deploying takes less than two hours and striking less than one hour. For storage, I like how the towers nest together and stack fairly tight, without taking much room.”

— Steve Sweet, Technical Director
Richmond CenterStage
Richmond, Virginia

EFFORTLESS SETUP • COMPACT NESTING • DURABLE CONSTRUCTION

Installation process from start to finish.

Ceiling Panels Assembly

Diva Tower Assembly

The counter-weighted base provides stability when the Diva towers are set in place and when they are moved from performance to storage areas.

Adjustable bases and pods make it easy to level Diva towers. You’ll love having the ability to quickly and precisely fine-tune your Diva presentation.

Wing stays and angle positioners make it easy to adjust Diva’s wing panels into the perfect position. Preset ceiling panel angles are infinitely adjustable.

The compact nesting design is a big space-saver. Use the Air Transporter to move towers into a stage wing where they rest snugly into a small footprint.

Adjustable ceiling panels attach to rigging and deploy quickly. When not in use, they store in the fly loft. Available with optional lighting.

EXCLUSIVE AIR TRANSPORTER REDFINES CONVENIENCE: This revolutionary feature moves Diva towers on a cushion of air for easy, one-person operation that also protects your stage floor. It’s simple to use: Just push a button and the Air Transporter does the work for you.
