

CORTANIUM™

BY WOODTONE

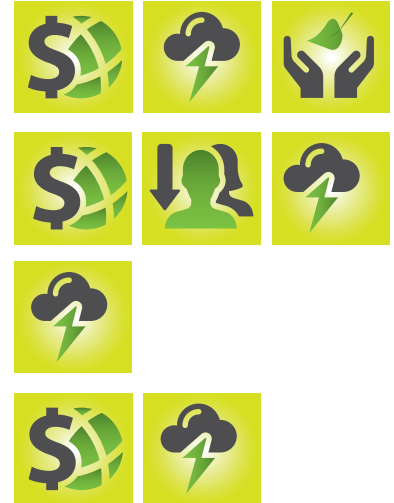

Nothing gets past Cortanium. Nothing.

WOODTONE™

The Cortanium™ difference

- The process begins with hand selected, high grade solid sawn lumber from the forests of North America.
- We then add a stabilizer for enhanced strength, durability and resistance against warping, cupping and twisting.
- Our proprietary treatment process penetrates and locks deep into the core of the wood. There is no incising, the attractive appearance grade is maintained.
- The results are incomparable performance and protection that's backed by an industry leading lifetime limited warranty against rot, decay and termite intrusion.
