

ISS Bookends

ISS Designs offers two options for bookends. The ISS Brackets also work well as bookends due to the lateral stiffness. Therefore, they are referred to as **ISS Bookend Brackets**. The typical design will use one bracket size shorter than the shelf bracket. For example, a 12' shelf will use 10" bookend brackets as bookends.

The second option for bookends is the **ISS Loop Bookend**. The ISS Designs Loop bookend offers a sleek design with simple functionality. The Loop bookend complements any shelving system or library designed with ISS Designs poles or wall standards. Just choose the location and attach the bookend at the desired point. The "channel locking" mechanism provides strong lateral support for your books at the ends of shelves. They also work as dividers that keep books from leaning over. The 4 1/2" height and 7 1/4" length works well for books of all sizes in shelf depths of 8" to 14". Anodized steel finish.

	Item Number	Description
	BR-004	4" ISS Bookend Bracket
	BR-006	6" ISS Bookend Bracket
	BR-008	8" ISS Bookend Bracket
