VISTA® Commercial Window Film

solar protection & energy savings for property, products & people

protection

at its

best

How does VISTA® do all this?

VISTA's® protective sheath bonds to windows with leading-edge clear, distortion-free adhesives. Its patented process lets glare-controlled sunlight pass through windows, while providing excellent optical quality and screening out heat and dangerous UV rays. By keeping room heat or air conditioning from escaping through windows, VISTA® helps to eliminate hot and cold spots within buildings.

What VISTA® can do for you.

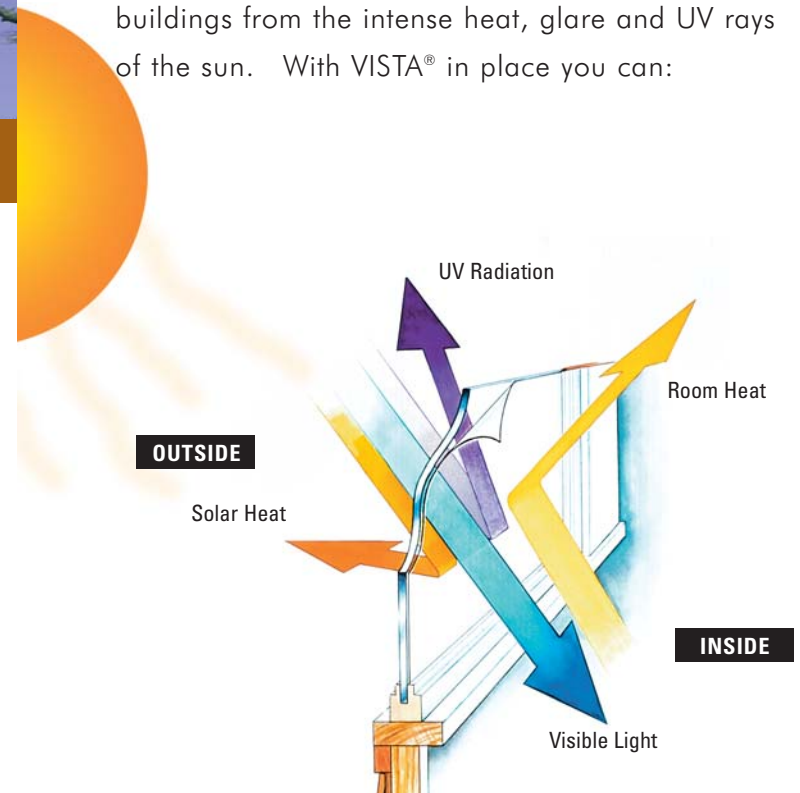

VISTA's protective micro-thin film shields commercial buildings from the intense heat, glare and UV rays of the sun. With VISTA® in place you can:

- reduce energy costs by improving the efficiency of the glass in your building
- improve tenant comfort – reducing tenant complaints
- provide a comfortable and productive working environment
- protect interior furnishings, merchandise, electronic equipment and occupants from harsh and damaging rays of the sun
- enhance building aesthetics with a single film for a "uniform" appearance, or dramatize architectural designs with multiple film choices
- avoid distracting reflections caused by inferior mirrored films and give occupants unobstructed window views day or night
- earn points toward LEED certification for energy savings when designing green*

see the beauty of VISTA® on your building's exterior

Expansive glass windows, atriums and skylights dominate commercial architecture as we know it today. People are drawn to and feel more comfortable in facilities rich in natural light, whether it be an office building, retail mall, hotel, restaurant, art gallery or airport. Yet such expanses of light through windows comes at a high price for building owners, managers and occupants.

While glass lets in an abundance of natural sunlight, it also allows excessive heat to build-up indoors – sending energy costs soaring. Unfiltered UV rays can also damage interiors and create distracting glare. With VISTA® Window Film protecting your building, you can also optimize energy efficiency, prolong the life of product displays and interior furnishings – even create a more productive and comfortable space for occupants. All the while ensuring superior optical clarity that preserves the natural light and open views that enrich today's commercial spaces.

VISTA® allows glare-controlled sunlight to pass through your windows while screening out heat and dangerous UVA and UVB rays.

*Refer to www.usgbc.org/leed for requirements

VISTA's protection is **clearly** beneficial in many ways:

Enhanced energy efficiency - and savings.

Easily applied to a window's interior, VISTA® keeps indoor temperatures comfortably consistent. VISTA can enhance the operational efficiency of your facility's HVAC equipment, and stop as much as 78 percent of the sun's heat at the windows edge, reducing costly heating and cooling bills and enhancing energy efficiency. Utility companies encourage window film use for energy conservation. Some even offer rebates for installation.

A Sustainable advantage.

If you are an architect or designer involved in green design and are looking for ways to save energy and reduce the impact on our environment, VISTA's safe and proven solar control window films qualify towards LEED Certification (Optimize Energy Performance Category). Go to: www.usgbc.org/leed for details/qualifications.

Stepped up comfort and productivity.

VISTA eliminates excessive eye-straining glare on computer screens and product displays. And it keeps employees and customers more comfortable, basking in consistent temperatures without intense hot or cold spots, or the threat of UV rays damaging skin and/or eyes.

Protection for your capital investments.

VISTA works for your building inside and out. The film's 99.9% UVA and UVB ray-blocking power helps preserve furnishings, product displays, artwork, archival documents, priceless antiques and other valuables from the potentially deteriorating effects of the sun.

At the same time, VISTA's uniform appearance can upgrade the aesthetics of a building's exterior, accentuating the architectural nuances.

realize bottom line efficiencies

VISTA® quality is guaranteed

Strict quality assurance procedures ensure that VISTA films conform to your specifications.

And, all VISTA Window Film commercial products come with a warranty against adhesive failure, peeling, cracking, demetalization and delamination from the manufacturer, CPFilms Inc.

Thousands of architects, curators, interior designers, engineers, facility managers and building owners nationwide specify and recommend VISTA® as their window film of choice. Why should you choose VISTA?

**Professional installation.
Simple and mess-free.**

VISTA's installation is non-invasive and accomplished with minimal downtime or disruption of your staff's daily schedule.

VISTA's nationwide network of dealers have been carefully selected, trained and certified for their commitment, quality and service excellence – from film selection to installation...throughout the life of your film.

VISTA's global capability makes it the film of choice for firms with multi-national locations.

VISTA® Window Film for every need...choose one, or combine multiple films. Consider:

Low-E Films

- for superior energy-conservation

Neutrals

- for a soft, neutral appearance

Ceramics

- non-reflective appearance
- excellent heat rejection

Spectrally Selective

- virtually invisible, energy savvy and aesthetically superior
- up to 74% visible light transmission
- #1 choice for exclusive retail and prime commercial real estate

Dual Reflective

- for high heat rejection and exterior aesthetic enhancement
- reflective on the outside
- low reflection on the inside

Safety/Security/Solar Combinations

- an invisible protective shield for safety and security
- helps prevent injuries from flying glass resulting from civil disturbances or extreme weather conditions
- deters "smash and grab" thieves
- various degrees of protection for various hazard levels

Privacy, Decorative & Custom Design Films

- for the look of etched glass,
- for custom repro of logos and designs
- to enhance retail display cases, stores windows, and glass partitions
