Imagine your business tomorrow.™

Glidden Professional™ Wash System

AkzoNobel takes environmental issues seriously and our aim is to develop innovative new products which have increased benefits for our customers and to reduce impact on the environment throughout their life cycle. The new Glidden Professional™ Wash System helps owners and contractors achieve best practice in their waste management. The Glidden Professional™ Wash System converts waterborne paint washings into clear water and solid waste allowing for easier control and disposal.

The Glidden Professional™ Wash System is the first of its kind in the U.S. market. It provides a responsible way of washing out painting tools, such as brushes and rollers, minimizing the impact of your company's waste disposal. The system converts the paints washings into a small amount of inert solid waste, and clear water which can be recycled, conserving water in the process.

The Perfect Solution for Commercial Construction Sites

There is a choice of three units. The larger LS200 Wash System is designed for use on construction sites and new build developments where there is a possibility of a higher concentration of paint washings being released into the local drains. With the increasing focus on environmental responsibility and waste disposal regulatory compliance, the system is set to become an indispensable part of the paint clean-up process. The portable LS40 is more mobile and can be wheeled from unit to unit on a site. Its compact nature means the empty unit can easily fit into a small van.

Three Available Sizes:

| | LS40 | LS120 | LS200 |
|------------------------|--------------|--------------|-------------|
| Readily Transportable | Yes | No | No |
| Integral Spray Taps | No | Yes | Yes |
| Cleans Rollers & Misc. | Yes | Yes | Yes |
| Water Based Paints | Yes | Yes | Yes |
| Users | 1-2 Painters | 2-4 Painters | 4+ Painters |

Step 1. Wash paint tools and paint accessories in wash basin.

Step 2. Once the unit is full, add the starter and finisher additives as directed to start the separation process

Step 3. After the separation process is complete, water and paint sludge are pumped out individually.

How the Glidden Professional™ Wash System Works

The Glidden Professional™ Wash System is an innovative two part system containing a sink and a separate filtration tank. The system can be used to clean rollers, brushes, paint tools and spray equipment which have been with waterborne paints. Once the unit is full, an additive is used to flocculate and separate the solid matter and water from the paint washings.

After three to four hours, clear water is left at the top of the tank, leaving paint sludge at the bottom. Heavy use may take longer to separate. Best results are achieved if left to settle overnight.

The clear water is then drawn off, filtered, and either recycled or properly disposed of according to your local waste water regulations. The remaining paint residue is pumped through a filter, ready for removal and drying. Once dry, this solid residue can be bagged and disposed of as non-hazardous solid waste according to your local waste disposal regulations.

Who we are:

We've built our business upon four key building blocks:

Collaborative Business Building

This is all about listening to our customers and reacting in the most productive way to help grow our customers' businesses.

Commercial Service Experience

We are focused 100% on the needs of the professional market. If there is a way to deliver better, more responsive service to our professional customers, we'll find it.

Best-for-Task Products

This is the promise we make to supply our customers with the most appropriate assortment of products, tailored to their specific needs.

Eco Leadership

Our Think Impact program sets goals to minimize the environmental impact throughout the entire product lifecycle – and we are committed to putting those goals into action, with measurable results.

About Glidden Professional Paint Centers

AkzoNobel's portfolio of Glidden Professional™ branded paints are sold through Glidden Professional Paint Centers and authorized independent dealers across the United States.

In addition to paints and related products, Glidden Professional Paint Centers offer contractors expert advice and services to simplify the product selection, delivery and job site clean up of any residential, commercial or industrial project. To learn more, visit www.gliddenprofessional.com.

About AkzoNobel

AkzoNobel is proud to be one of the world's leading industrial companies. Based in Amsterdam, the Netherlands, we make and supply a wide range of paints, coatings and specialty chemicals – 2008 revenue totaled €15.4 billion. In fact, we are the largest global paints and coatings company. As a major producer of specialty chemicals we supply industries worldwide with quality ingredients for life's essentials. We think about the future, but act in the present. We're passionate about introducing new ideas and developing sustainable answers for our customers. That's why our 60,000 employees – who are based in more than 80 countries – are committed to excellence and delivering Tomorrow's Answers Today™.
