EcoPrem™

Most of us enjoy the beauty and warmth of natural wood until we put it outdoors. Once exposed to the elements most wood begins to warp, twist, cup, split, decay, rot, and mold. Long ago the Vikings learned to overcome this problem by treating the wood with fire, which in turn made it more resistant to the elements.

The modern version of this ancient process is called EcoPrem™. Today we use a combination of heat and steam to modify natural wood. This modification creates a decay, rot, insect and mold resistant wood. This patented process turns natural wood into a low maintenance, weather resistant product that will not warp, cup, twist and split when exposed to the elements.

EcoVantage starts out with #1 grade southern yellow pine and through the thermal modification process creates EcoPrem. From this base material we have developed a number of system oriented products for improving the outdoor living experience.

EcoDeck™ Premium Wood Deck & Railing System

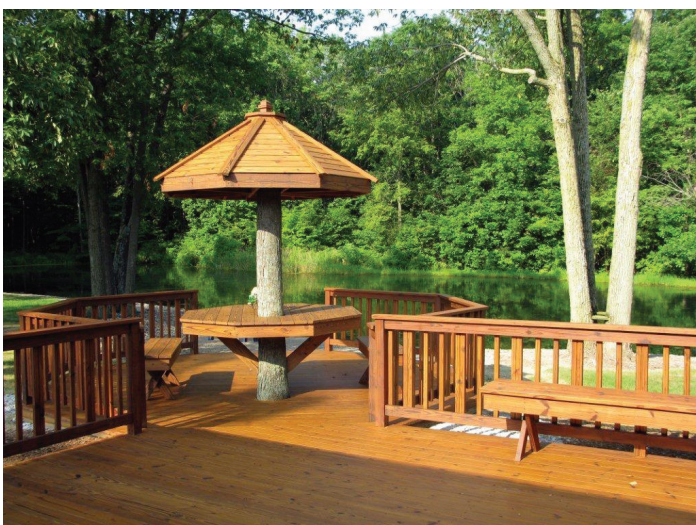

Using EcoPrem as the base material we have developed the superior deck and railing product **EcoDeck!**

The EcoDeck system is a beautiful, modular system that is simple to install and incredibly easy to use. All the components of the EcoDeck system are designed to provide flexible design elements to maximize your creative options.

EcoDeck Decking comes in a variety of styles and shapes.

STANDARD DECKING

EcoDeck standard decking comes in 1-1/4" thick x 5", 6-3/4", and 8-1/2" wide

boards.

CROWN DECKING

EcoDeck crowned decking comes in 1-1/4" thick x 5" wide boards.

GROOVED DECKING

Both the standard and crowned deck boards come in the "new" grooved style which accommodates the EcoDeck Clip System.

RAILING COMPONENTS

A wide variety of railing components have been developed to provide the greatest amount of design flexibility possible. Many of the railing components have been designed to provide faster installation time.

StayTru™ Premium Structural Wood Material

When it comes to structural materials, great appearance has never been an issue. StayTru is the answer. By using EcoPrem as the base material we have created the ultimate structural product. A structurally sound wood material without any of the chemical treatment. Think about it, a structural wood component that is straight and true, won't cup, twist or split and with the added bonus

of looking great when it's finished!

Combine StayTru with EcoDeck and you have 30 year warranted decking project from the ground up!

EternaClad Premium Wood Siding Products

Have you always wanted that old fashioned wood siding look, but didn't want all the maintenance problems that come with it.

Using EcoPrem, we developed a residential siding called **EternaClad**. **EternaClad** is a line of siding products that can provide the rich old fashioned look of wood siding, but without the issues of rot, decay, mold or insects. EternaClad can either be stained with a translucent stain to enhance the natural grain look of the wood.

RyteScape™ Premium Wood Fence System

There is nothing quite like a nice wood fence and especially since fences make for great neighbors. The warm, inviting look of a natural wood fence is something you can't duplicate with plastic. Using EcoPrem we have developed the perfect wood fence system

RyteScape Fencing.

Install this fence and stop worrying about rot, warping, cupping replacing your fence for a long, long time. Stain it the color you want or let it go gray, either way you have a good looking solid fence for 30 years and we are willing to warrant that it will!

RyteScape™ Pergola & Arbor Kits

Sunset Pergolas come in (2) different styles, free standing and house attached.

Sierra Arbors come in (2) different sizes, (48") and (72"). Both can be customized to meet your needs.
