

Innovative Tile and Stone  
Installation Systems

# AIA/CES and CSI/CEN Continuing Education Seminars

*LATICRETE Ceramic Tile and Stone Installation Systems Seminars*

### For Further Information:

Phone: 1.800.243.4788, ext. 262 (U.S. and Canada only) or +1.203.393.0010, ext. 262 (outside U.S. and Canada)

Fax: +1.203.393.1948

[seminars@laticrete.com](mailto:seminars@laticrete.com)

[www.laticrete.com](http://www.laticrete.com)

- Content based on current industry standards and challenges encountered in construction today
- An understanding of the many choices in uses, substrates and finishes — and how these choices affect installation systems requirements
- Information about how to avoid the most common and costly installation problems
- A preview of unique specification tools designed to streamline the specification process

LATICRETE is a provider of American Institute of Architects/Continuing Education Seminars (AIA/CES) and Construction Specifications Institute/Continuing Education Network (CSI/CEN) programs. Our registered programs enable the design professional to keep current with technological developments

and technical issues related to ceramic tile and stone applications. The information provided creates a deeper level of understanding which serves to increase clarity of specifications, to prevent costly problems and disputes, and to assure durable and low maintenance installations.

**THE FOLLOWING PROGRAMS EACH CARRY A 1.0 AIA HSW CREDIT:  
THE FOLLOWING PROGRAMS EACH CARRY A 0.1 CSICEU:**

**AIA-01**

**Water as Design Medium**

This educational seminar will consider how ceramic tile and stone can be used in water features. It will provide helpful information to architects and specifiers on what to consider when using tile and stone in wet areas.

**AIA-03**

**Tile and Stone Installation 101**

This generic educational seminar gives the design practitioner and/or construction manager the practical information necessary to properly specify the correct tile for a specific situation and the job appropriate installation technique.

**AIA-04**

**Direct Adhered Facade Systems**

Tile and stone are beautiful and functional products when used on building facades. Learn how ceramic tile and stone can be used to clad the exteriors of buildings to create beautiful design features. This educational seminar considers two actual job case studies that employ two different direct adhered facade installation methods and techniques.

**AIA-07**

**Healthy Tile and Stone Installations**

More and more projects are going GREEN! How does tile and stone fit in? This educational seminar will provide architects and specifiers with information on how to specify and use tile and stone to promote a healthy building environment. Learn how ceramic tile and stone fits in with the green building movement.

**AIA-08**

**Grout for Tile and Stone**

With so many types of grouting materials available; what distinguishes one from the other? This educational seminar will provide architects and specifiers with information on how to specify the various types of grouting materials that are available on the market.

**CSI-01**

**AIA-09**

**Proper Surface Preparation for Successful Installations**

A successful and functional tile and stone application is only as good as its base or substrate. This generic educational seminar will provide architects and specifiers with information on how to correctly prepare substrates to receive ceramic tile and stone finishes. A discussion of industry standards will be considered as well as the various methods and techniques that can be used to effectively prepare substrates.

**AIA-10**

**Tile and Stone and the Fight Against Mold**

There has been a lot said about mold and mildew. What information is truly accurate? What causes mold and mildew on tile and stone applications? This educational seminar will provide architects and specifiers with information on how to specify and use tile and stone to avoid the problem of mold and mildew. Learn how ceramic tile and stone fits in with the green building movement.

**AIA-18**

**Stone Installation Solutions and Options – Vertical Installations**

The interest and growing demand for installing ceramic and stone tile as a cladding material on both exterior facades and interior feature walls has challenged the design professional to research and specify the proper installation methods. This program will provide an overview of the four vertical installation options, the features and benefits and provide installed cost comparisons.
