DESCRIPTION
The Under Slab Pyro-Flex Fire Barrier Protection System is the market's first Underslab fire barrier system. Pyro-Flex is an engineered high performance fire resistive system for sealing expansion joint openings. The system is comprised of a flexible, high purity ceramic fiber blanket, stainless steel foil and a matrix of fire resistive cloth as required to achieve a specified protection and endurance rating. System is secured directly to the underside of the expansion joint opening.

BASIC USE
UPF is a fire resistive sealing system designed for sealing expansion joint openings in parking structures, buildings and other structures exposed to exterior weather conditions.

PERFORMANCE STANDARDS
- UL 2079-Class I, II and III
- ASTM E-119
- ASTM E-1966
- ASTM E-1399

CODE COMPLIANCE
- UBC, SBC, BOCA
- International Building Code
- CAN-S101

FEATURES
- Designed to provide the required fire endurance rating of 2 through 5 hours.
- Up to 18” fire resistance ratings.
- Listed with an accredited independent laboratory.
- Accommodates dynamic movement without stress or degradation to its components.
- Minimizes passage of smoke.

SPECIAL FEATURES
- Design compatible with most waterproof expansion joints – no underside cover required.
- No fire resistive caulks required.
- Accommodates seismic lateral shear.

PACKAGING
PyroFlex supplied in 25-foot lengths shipped on wooden pallets or cardboard cartons. Metal retainers supplied in 10-foot lengths shipped on wooden pallets or cardboard cartons. Hardware and other accessories packaged in cardboard cartons.

STORAGE & PROTECTION
All materials should be stored in a completely dry location prior to use. Fire Barrier must be kept dry before, during and after installation.

LIMITATIONS
- Expansion joint openings must be parallel and straight to achieve fire-resistant seal.
- Adjacent construction must have fire-resistant ratings equal to or greater than the rating of the fire barrier systems.

PRECAUTIONS
Use protective goggles and gloves. Read and follow labels and Material Safety Data Sheet before use.

Contact MM Systems for larger sizes and project specific designs.

INSTALLATION

1. Remove and repair all unsound concrete in and around the joint opening. All spalls must be repaired with compatible patching material.
2. Uncoll fire barrier and fold into a "U" shape configuration.
3. Install fire barrier into underslab expansion joint opening.
4. Attach metal retaining angles.
5. Install anchors at specified intervals.

LIMITED WARRANTY

MM Systems warrants the MM Pyro-Flex System to be free of defects in material and conform to technical data listed. We make no warranty as to color or appearance. Since methods of application can affect performance and on site conditions are beyond our control, MM Systems makes no other warranty, expressed or implied, including warranties of MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. MM Systems sole obligation shall be, at its option, to replace, or to refund the purchase price of the quantity of system proved to be defective. In no event shall MM Systems be liable for any special, incidental, consequential, loss of profits or punitive damages. Other warranties may be available when installed by a MM Certified Contractor.

TESTING COMPLIANCE

1. Certified and listed by an accredited third party witnessing agency.
2. Tested in accordance with International Building Code Section 712.3, ASTM E1966 and UL 2079 at a maximum listed expansion joint opening as defined by ASTM E1399.
4. Tested with positive pressure.
5. Cycle tested full length incorporating splice transitions. Pyro-Flex fire barrier system meets or exceeds the following dynamic movement requirements (cpm equals cycles per minute):
   a. Seismic movement rating of 30 (cpm) for 100 cycles, followed by;
   b. Thermal movement rating of 10 (cpm) for 400 cycles.
   c. Total Cycles Required - 500 cycles.

MM Systems reserves the right to amend or withdraw information contained herein, without notice, and will not be liable for any inaccuracy or ambiguity of said information.
