column covers

We developed graph to respond to designers' need for a simple and precise way to use new materials on wall surfaces.

There are only three components to graph, an aluminum framework, engineered to your design; surface panels of your choosing; clips that attach the panels to the framework.

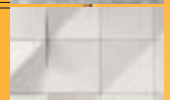

This innovative wall finish system allows for limitless configurations, countless surface materials and minimal field labor. In addition, the clips are not permanently adhered to the framework and therefore your environment can be refreshed cost effectively.

Fry Reglet provides the materials that help architects and designers utilize the contrast of light and shadow to impact the design of contemporary structures. Fry Reglet Reveals, Moldings and Trim for drywall, plaster and stucco, produce rich architectural effects on both interior and exterior wall surfaces. In addition, Fry Reglet products are aluminum, one of the “greenest” and most recyclable materials in the building industry, contributing to sustainability.

Fry Reglet provides a total solution with detailed shop drawings, installation instructions and technical support second to none.

## ABOUT FRY REGLET

Founded in 1949, Fry Reglet is a leading manufacturer of pre-engineered architectural metal products for commercial construction, architectural and design industries. Our products include interior surface systems, column covers, reveals & moldings, roof flashing and specialty products. By working closely with the architect and design team, our engineering staff provides project guidance and product solutions to meet any architectural requirement. Although we offer an extensive line of standard "off the shelf" products, we have the capability to design, detail and produce specialty and custom components to meet any design challenge. Detailed installation drawings, templates, instructions and technical support ensure quality control in the field, and are part of our on-going mission of exceptional service.

### Our Vision

Fry Reglet will continue to improve current products, and will develop new products through collaborative development with our customers to help design professionals bring their visions to reality.

### Commitment to Sustainability

Fry Reglet is committed to protecting the environment through the intelligent use of recyclable materials. All Fry Reglet reveals and moldings are extruded from aluminum with a minimum of 65% post-consumer recycled content. Aluminum is one of the most recycled products on earth, with a high-recovery value and a large recycling market. Fry Reglet products are available from three locations in the United States, helping to reduce the environmental impact of transportation from plant to jobsite.

column covers

A new era has dawned in the use and design of columns. Fry Reglet's pre-engineered column covers give architects greater flexibility than ever before. Whether for interior or exterior applications, column covers in various finishes and reveals add aesthetic appeal as well as easy access conduits for electrical, plumbing and data processing infrastructure.

Fry Reglet provides a total solution complete with detailed shop drawings, installation instructions and technical support second to none.
