Architectural Specification in the Healthcare Market

SLOAN[®]

Sloan's Plumbing Solutions... set the Standards for the Healthcare Market

Sloan's touch-free electronics are an effective measure in helping healthcare facilities reduce infections. The touch-free aspect enhances the avoidance of immediate recontamination after washing, while electronic controls help break the chain of nosocomial infections such as Legionella.

High Value

Sloan's electronic faucets and Flushometers provide the sensor-operated, hands-free operation along with the aesthetics and finish options necessary to complement any healthcare interior design.

Automatic

Sloan's Sentinel Flush® automatically activates Flushometers at preset times (if inactive for 24-hours), not only providing a clean, rinsing flush but reducing odors and the spread of infectious diseases.

Aesthetic

Sloan's plumbing solutions are available in a variety of contemporary styles and finishes.

Break the Chain of Infection

Sloan's touchless handwashing faucets with patented **Line Purge*** keep supply line water fresh by activating the faucet at preset intervals between uses. According to the Occupational Safety and Health Administration (OSHA), frequent purging of supply lines helps alleviate water stagnation and reduces growth of Legionella organisms.

* Available as battery-operated (EBF) or hard-wired (ETF). Sloan's new line purge option provides the ultimate in sanitary protection that is needed in healthcare facilities. U.S. Patent 6,898,552

SANIGUARD® Antimicrobial Plumbing Protection

Sloan's manual Flushometer handles can be supplied with a SANIGUARD® coating that inhibits the growth of common bacteria, molds and fungi that cause odors, staining and product deterioration. The SANIGUARD® treatment is built into the handles and will last for the useful life of the product.

SANIGUARD® coatings utilize a tri-modal efficacy, unique to inorganic silver-based antimicrobials, to disrupt the metabolic and reproductive systems of the various microorganisms.

SANIGUARD® coatings are designed to protect the product and will not protect users or others from food-borne or disease-causing microorganisms. You must continue to observe proper hygienic and cleaning practices in addition to the use of SANIGUARD® coatings.

Sloan...a Leader in Controlling Infections Within the Healthcare Market

Every year more than 2 million patients develop a nosocomial infection while in the hospital*. Providing touch-free operation of faucets and flushometers along with clean, sanitary conditions of faucets and flushometers can help eliminate the spread of infection.

Bacteria can easily be transferred from faucets, flushometers, and sink surfaces to the hands of staff and patients and then spread throughout the healthcare facility.

Sloan recognized that eliminating these contact points is extremely important in healthcare environments.

G2 Optima Plus® and Royal® Optima® Electronic Flushometers

- Sensor-operated for hands-free operation
- ADA compliant
- Courtesy Flush override
- Dual-filtered fixed bypass diaphragm for various water conditions
- Adjustable tailpiece for flexibility in installations
- Vandal-resistant stop cap
- Complete accessories

Sloan sensor-operated solutions provide the hands-free advantage: reducing cross contamination, addressing bacteria spread concerns and satisfying customer expectations.

Sloan solutions are perfect for patient rooms, scrub rooms, public restrooms, nurses' stations, family restrooms, diaper-changing stations, nursing homes, medical schools and laboratories, and anywhere good handwashing policies are practiced.

* Centers for Disease Control and Prevention, "Public Health Focus: Surveillance, Prevention, and Control of Nosocomial Infections."

Eliminating contact with dirty surfaces is essential in healthcare environments. Sloan electronic plumbing solutions are the ultimate in non-contact strategies for your facility.
