## COILING SERVICE DOORS

### SD3000 SERIES

**Product Description:** Coiling Service Doors are custom designed to accommodate virtually any opening size and configuration to provide for both security and protection. These types of doors are available with either a baked enamel prime painted finish of a McKeon Door standard color, a powder coated finish of a color as selected or in stainless steel with a number 4 polished finish.

**Product Advantages:** Coiling Service Doors utilize less headroom and side room than other product alternatives such as swinging, sliding and telescoping type doors. These doors typically offer more security than alternate products, are highly durable and easy to repair and maintain.

**Design Alternatives:** Model SD3016 is much more heavier in construction than a standard coiling service door. These doors are designed with 16 gauge curtains to provide for both maximum security and protection against wind loads of up to 150 mph. These doors can be designed for a minimum of 100,000 cycles which is five times the cycle life than that of a standard coiling service door.

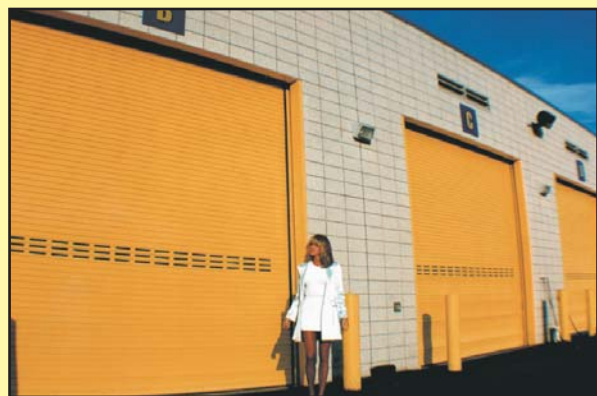

**Applications:** Coiling Service Doors are ideal for exterior and interior applications. These doors are ideal in applications where durability, frequent cycling, or severe exposure is an issue. Coiling Service Doors are primarily used in parking facilities, port authorities (piers or airports), transit authorities, sanitation departments, environmental control facilities, and other heavy industrial applications.

Model SD3016 Ideal For Security & High Cycle Applications

Perforated Service Doors Used In High Cycle Applications

**SERVICE DOORS ARE AVAILABLE UP TO 100 FEET IN WIDTH**
