"Green Building" Solutions for Gym Floors:

1. **FSC maple certified by SmartWood:** Robbins manufactures strip maple flooring that is FSC certified by SmartWood, which can be incorporated into a high performance sports surface system such as Bio-Channel® Star.
2. **Robbins Continuous Strip® XL450:** XL450 is ½" strip maple flooring for gym floors. XL450 greatly increases the amount of flooring which can be derived from a unit of lumber, minimizing waste. In addition, XL450 looks great!
3. **Robbins factory finish technology:** Factory finishing greatly reduces or eliminates on job-site VOC emissions; factory finishing releases less than 1% of the VOCs that would be released during an on-site finishing of the floor.
4. **Robbins Pulastic® synthetic sports floor systems:** The manufacturing facility where our Pulastic® resins are produced is certified as meeting the ISO 14001 standard. ISO 14000 standards are a management tool enabling an organization to control the impact of its activities, products or services on the environment.

For more information on Robbins' complete line of indoor sports surfaces, call 800.543.1913.
