

Architectural Door Trim Hardware

ROCKWOOD

ASSA ABLOY

ASSA ABLOY, the global leader
in door opening solutions

Architectural Hardware Solutions

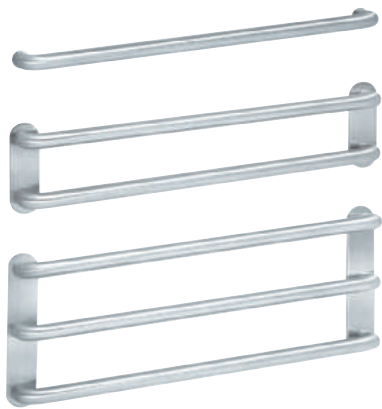

The items shown in this brochure are only a representative selection of our line. We have standard items for hospitals, schools, and other institutions. We also have a wide selection of hardware including door stops, coat and hat hooks, signs and filler plates. Please see our representative in your area or visit our website at www.rockwoodmfg.com to view our Full Line and Architectural Door Pull catalogs.

Series 47 Push and Pull Bar Sets

Push and pull bar sets are available with an assortment of components and mounting applications which provide ample opportunity for meeting your individual requirements. These push bars are custom made to the center-to-center dimension required to fit your doors.

- Standard and special architectural finishes available
- Engraving "PUSH" or "PULL"
- Base plates available
- Heavy duty versions of most fastening types available

Series 47 Push Bars

Our Series 47 push bars are 1" diameter and available with or without base plates and they meet ANSI 156.6 standards. These push bars are custom made to the center-to-center dimension required to fit your doors.

- Standard and special architectural finishes available
- Engraving "PUSH" or "PULL"
- Base plates available
- Heavy duty versions of most fastening types available

Push Plates

Produced from the largest available selection of base metals and finishes. A complete listing may be found on our website or in our Full Line Architectural Catalog. The push plates are standardly .050" thick and other thicknesses are available upon request. They meet ANSI 156.6 standards. Plates can be mated with most any door pull of your choice.

Flush Pulls

Shown are just a few of our many styles of flush pulls. All face plates are fabricated from 1/8" thick material providing a solid appearance and structure. Tamperproof torx machine screws can be furnished for high security installations.

Door Pulls (solid & tubular)

These sturdy pulls will enhance the look of any door. Single, concealed or back to back mountings available to your specifications. They are manufactured from 1" diameter solid bar stock. Because they are fabricated in our own factory, a variety of modifications may easily be made. These door pulls are available in standard and special architectural finishes, and conform to ANSI 156.6 standards.

These door pulls are available in standard and special architectural finishes, and conform to ANSI 156.6 standards.

T-Series Tubular Pulls are also available. They are made from sturdy .065" thick wall tubing. Solid brass or stainless steel inserts are brazed into the ends to provide a solid area for our guaranteed mounting systems.

Pull Plates

These are just a few of our most popular pull plates.

They are stocked in standard architectural finishes but available in any finish. They are .050" thick wrought and meet ANSI 156.6 standards. See our Full Line catalog for more pull plate options.

Vandal Resistant Trim

Heavy duty 1/8" stainless steel construction, thru bolt mounted, and has a tamper resistant design. The VRT22 features a soft black textured grip.

Roller Latches

Our heavy duty roller latches have a variety of strikes to suit several different conditions. The latches feature heavy duty springs and solid nylon rollers for long life. They are adjustable to compensate for varying door to jamb clearance.

Kick Plates

Rockwood K1050 Series standard duty door plates are available for immediate shipment in all standard sizes and finishes. Standard metal thickness is .050"; however, a thinner economy gauge is available in US32D/630 stainless steel. Other thicknesses are also available. Door plates meet all ANSI A156.6 requirements.

OPTIONS:

- SA - self-adhesive mounting
- TEK - self-drilling screws
- Beveled 3 or 4 edges, specify B3E or B4E
- CSK - countersunk holes
- TORX - security torx screws
- Cutouts for locks, louvers, or windows
- Screw mounting (K1050F) and UL listed for use on 90-minute label wood doors and 3-hour label metal doors

Door Edges

Most door edges are fabricated from .050" thick stainless steel; however, they are available in other metals and finishes. UL fire rated listed for stainless steel non-mortise applications; specify UL when ordering. These door edges are sized for 1-3/4" thick wood or metal doors. Our 306-AST and 306B-AST door edges include an astragal, providing additional protection against vandalism.

Door Stops

Shown are just a few of our most popular door stops. Our DuraFlex® bumpers are firm and resilient, non-yellowing, and age-resistant. Please refer to our Full Line catalog for more varieties and detailed information.

Wall Bumper

Heavy Duty Stops

Kick Down Stops

Dome Stops

Floor Stops

Flush Bolts

Shown are just a few of our many styles of flush bolts. All our flush bolts are UL listed. See our Full Line catalog or website for more selections and detailed information.

Automatic — The patented non-handed cam triggering device is the heart of this smooth-acting mechanism; only five pounds of force is required to drive a pair of bolts allowing door closing devices to perform at maximum efficiency.

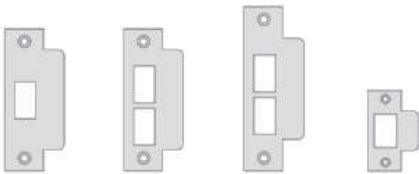

Lever Extension — Smooth acting with sturdy construction.

Custom Strikes

Custom strikes are available by providing us with measurements for your special strike requirements. Lock strikes are .090" thick, unless otherwise specified.

Architectural Door Pulls

Rockwood is committed in making the door hardware you want. Shown are just a few of our specialty door pulls. Please don't hesitate to ask for minor design or size changes to existing products or completely custom designs. See our Architectural Door Pull Brochure or visit our website for custom designs and capabilities.

MegaTek™ (long door pulls) — Rockwood uses the latest

technology combined with careful craftsmanship giving this line a stable, rugged construction. These pulls come in both straight and offset versions with both square, rounded and bent ends. Available in 1" solid and 1¼" and 1½" diameter tubing in most architectural finishes.

BandWidth™ (collar mount pulls) — This pull design

features a collar that attaches the grip section to the mounting posts. The collar can be furnished in a matching finish and base metal, or any combination of contrasting finishes of similar or dissimilar metals. Round end versions add an extra element of interest.

NeoTek™ (post mounted GripZone™) — These post

mounted door pulls and push bars meld the durable and enticing GripZone finish with a contemporary post mounted style. Both straight and offset pulls are available in 3 diameters. One inch is made from solid rod, larger diameters are made from tubular material. Custom lengths are readily available.
