A Mestek Company

Leadership in Innovative Louver Design Technology

Louvers, Sunshades & Grilles

All of your Architectural Product needs in one place

Product Presentation

American Warming and Ventilating, founded in 1904, designs and manufactures a comprehensive line of architectural louvers, sunshades, and decorative grilles to complement your architectural designs. AWV can easily adapt standard high-performance louvers for your specific building requirements.

Applications

AWV is adept at working individually with customers on specific designs for louvers, sunshades, grilles, and screens too. A wealth of experience with many types of applications will help you achieve desired results both efficiently and economically

Features

AWV offers many louver designs with maximum free area and exceptional airflow. Their engineering department operates a comprehensive research and development program that directs the design of new products and improves existing products through re-engineering. As a result, the performance and appearance of AWV's complete line of extruded louvers are outstanding.

Performance Capabilities

AWV can adapt designs too. For example, high-performance louvers can be adapted to your particular requirements for particular shapes: triangular, round, half-round, hexagonal, and even pyramid.

Materials Used

AWV louvers are constructed of extruded aluminum and mirror-finish stainless steel or other alloys. All of AWV's louvers are available in a large selection of standard KYNAR® and enamel colors as well as in a variety of anodized finishes. Many color matches and special finishes are offered to meet your distinctive requirements.

ARCHITECTURAL PRODUCTS

LOUVERS

American Warming has a full line of louver products including Extreme Weather Louvers that are Miami-Dade County Approved as well as Wind-Driven Rain louvers, and several models of thinline louvers which are ideal to adapt to most curtain wall and window framing systems.

SUNSHADES

Architectural sunshades feature custom designs or canopy styles utilizing either conventional or airfoil style blades. Extruded aluminum is used throughout. Additionally, sunshades are available in a variety of colors and finishes.

GRILLES

Decorative grilles and equipment screens are available in custom designs, colors and finishes. A variety of grid patterns are available including angular, egg crate, hexagon, horizontal, staggered, triangular, and vertical. Standard material for either is aluminum or galvanized steel.
