## Corrosion Resistant Finish (CRF)™

---

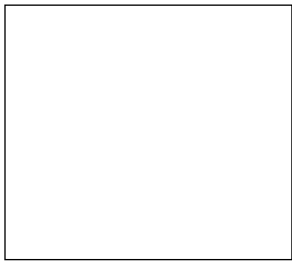

### Standard System Finish

Kalwall's Corrosion Resistant Finish (CRF) is a high-performance architectural coating for all aluminum components. The spray-applied, air-dried, two-part system, including the latest chemically curable fluoropolymer resins, permits large welded and mechanically assembled Kalwall components to be finished as a unit. Field touch-ups with the same coatings are easily performed. CRF exceeds AAMA 2604 and is available in both standard and custom colors.

---

### Standard CRF Colors:

---

white #00

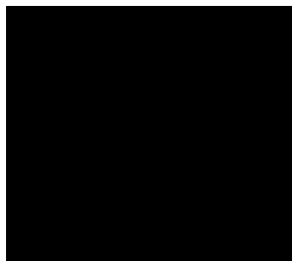

bone white #21B

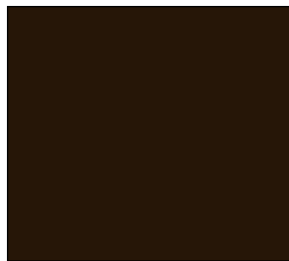

gray #80

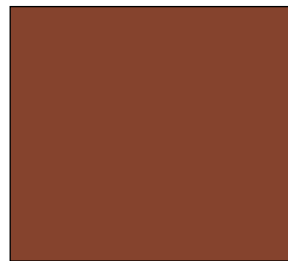

aluminum #79

black #95

bronze #85

brick #88

minuette #03

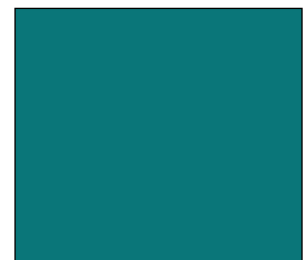

blue #15

coro blue #48

hartford green #75

mountain green #70

banner red #90

A clear top coat is optional for added protection against severe weathering and chemical exposure. The color swatches shown above are approximations of the actual colors. Physical samples on aluminum substrates are available for final color selection. Kalwall samples are best viewed under natural daylight. Visit [KALWALL.COM](http://KALWALL.COM) or call 1 800 258 9777 to make a sample request.
