

## MS 360™ Sliding Mall Front

The MS 360™ is the ideal mall slider when economy and ease of operation are primary considerations. Door panels glide effortlessly on multiple tracks. To close, simply pull one panel and the others (which link to the first panel with our exclusive flange & neoprene bumper system) are pulled out on their own track. To open, slide the door panels back to their original position at one or both sides of the opening. A good choice for either schools, offices or malls, the panels can recess into pockets, act as conventional multi-sliding doors, or as by-passing wall doors.

### CONSTRUCTION

The Vistawall exclusive flange and neoprene bumper system overlaps from one panel to the next which prevents racking. These interlocking panels cannot be removed when in locked position. Panels arranged in more than one plane interlock at meeting stiles while those meeting in the same plane butt and interlock, forming a safe, secure, tamper resistant barrier. Panels can be manufactured as high as 12'0" and as wide as

7'0" and may require an intermediate horizontal depending on the configuration desired. (See the Vistawall detail binder or speak with a Vistawall sales representative for further information.)

### CONFIGURATIONS

Available in three standard styles, the MS 360 readily adapts to any interior location. When opened, the *Conventional Multi-Sliding Door* stacks the panels in view. For example, a 4-panel unit will slide to one side allowing access through 3/4 of the original opening. With a *By-Passing Wall Door*, sliding panels are offset to the interior or exterior of the wall opening allowing full access through the entire original opening. The *Pocket Door* recesses into a prepared pocket in the wall also permitting full access through the finished opening. All three sliding door types are flush glazed after assembly and are manufactured for 1/4" glazing only.

## HARDWARE

Vistawall MS 360 panels are equipped with adjustable, heavy duty, hardened steel, tandem wheel assemblies equipped with two self contained steel bearing rollers. The panels roll on a cap manufactured of rugged 22 gauge roll formed stainless steel. An Adams Rite MS 1850 A505 Hookbolt cylinder lock (31/32" backset) is installed for non by-passing panels with flush pulls available for pocket doors.

Other Vistawall products include standard entrances, store fronts, window systems and curtain walls as well as Naturalite Skylight Systems, Skywall Translucent Systems and Modu-Line Window Systems

*For additional information see your Vistawall Detail Catalog and call your local Vistawall representative or Vistawall regional sales office.*

The MS 360™ system is one in the series of Alumiline® sliding mall fronts. Alumiline® is a registered trademark of Vistawall Architectural Products.
