Composite Panels

Facade Cladding Systems

▶ Rainscreen Systems

Our CCRS dry joint system, with its caulk free design, offers the desired crisp, clean, and contemporary look for today's architectural composite cladding design intent.

- Low maintenance and cost effective
- Flexible design without sealant in the reveals
- Exceeds AAMA 508 Standards

▶ Wet Joint Systems

Our CCRWJ system has been in the marketplace for many years. The system utilizes continuous perimeter extrusions which reinforce the panel returns and feature sliding angle clips.

- Exceeds ASTM 283, ASTM 330, ASTM 331 and AAMA 501 Standards
- Pre-engineered to meet your design criteria
- Virtually any size, shape, and finish

▶ Glazed-In Systems

Glazed-in panels are designed to be used as an alternate for glass in any glazing, curtain wall, spandrel and window application. The panels are available in a variety of thicknesses.

- Different colors available on each side
- Virtually any size, shape, and finish

Advantages

Interlocking and screw alignment tabs

Specialized perimeter attachment systems

Sliding clips to align with stud locations

Pre-punched clips for faster install

Custom shapes and finishes available

ColorMatch™ Screws

Options:

- Kevlar™ infused for hurricane ratings

**Faster and
Easier to Install**

▶ Plate Panel Systems

Our CPWJ Plate Panel systems feature our perimeter track and sliding clip system and offer significant advantages in certain applications.

- Custom colors available
- Ideal for complex configurations and shapes
- Smooth finish seamless corners

▶ Column Covers

Doralco's column cover systems give a finished look to unsightly support columns. Our column wraps can be formed in various shapes, including: round, oval, square, rectangular, and racetrack with edge finish options of caulked, reveal or hairline joints.

- Stainless steel
- Painted or Anodized Aluminum
- Aluminum Composite
