Stile Fiesta: A Unique Alternative

Fiesta is a metal roofing system designed to simulate the durable yet elegant look of clay roofing tiles. It offers total protection coverage; distinctive shape and dimension; the choice to blend with nature; and technology to last for years.

Recommended application is over Metal Sales High-Temperature Underlayment (MS-HT) with a solid substrate on a 3:12 or greater slope.

Panels are attached with thru-fasteners coated to match the panel finish and placed in the shadow line of the panel step. A full complement of standard formed accessories are available for typical roof conditions.

Consider the Features of Fiesta

- The architectural benefits of tile and the cost-effective, light-weight, easy-installation of steel
- 1 meter (39.4") coverage width, 3' to 24' lengths
- 26 gauge galvanized steel
- Five unique designs in Fluorocarbon (PVDF) with a 45-year finish warranty
- Class A Fire Rating
- Dade County approved
- UL580-Class 90 approved

The Fiesta Series installation process offers a unique exposed-fastened design – including foam closures, weather-resistant tape-sealant, and a durable high-temperature underlayment.

FIESTA SERIES SPECIFICATIONS

Slope. The minimum recommended slope for the Stile Fiesta roof panel is 3:12.

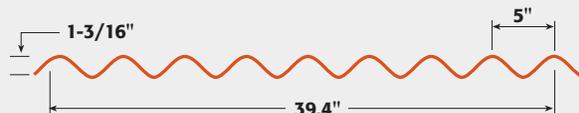

Substructure. The recommended substrate is 5/8" plywood with Metal Sales High-Temperature Underlayment (MS-HT). To avoid panel distortion, use a properly aligned and uniform substructure. NOTE: Stile Fiesta roof panels are not recommended for use over open structural framing.

Coverage. Stile Fiesta panels have a coverage of 39.4" (1 meter).

Length. Minimum factory cut panel length is 3'-0". Maximum panel length is 24'-0". Panel lengths are available in 1'-0" increments.

Fasteners. The fastener selection guide should be consulted for choosing the proper fastener for specific applications. Quantity and type of fastener must meet necessary loading and code requirements. NOTE: All panels are subject to surface distortion due to improperly applied fasteners. Overdriven fasteners will cause stress and induce oil canning across the face of the panel at or near the point of attachment.

Availability. Finish: Kynar 500 (PVDF) colors. Gauge: 26ga standard
