

**FLOOD BARRIERS
FLOOD GATES
WATERTIGHT DOORS & HATCHES
AIRTIGHT & SECURITY DOORS**

America's Leader in Protective Door Systems

Thousands of Presray installations protect hospitals, schools, nuclear power plants, government labs, Fortune 500 headquarters and defense installations around the globe. Presray provides today's most advanced watertight and airtight barriers. Many customers find that Presray flood barriers allow them to recapture the ground floor in FEMA flood zones, planning ground level entrance rather than elevated structures. Materials include aluminum, A36 Steel and Stainless Steel.

All doors and hatches are uniquely engineered to exact specifications ensuring a solid, tight fit. Presray offers both pneumatically sealed and compression gasket airtight doors for a choice of sealing technologies that make an ideal combination of security, accessibility and value at demanding BSL classifications. Presray provides service from the planning stage to drawings and specifications to installation, maintenance and testing. Many installations provide quick, easy deployment by one person, and in some cases self-contained inflation systems and double leaf models are available. Presray can even provide accessories such as wall hangars and transport dollies.

CGSL Stackable Gasketed Stop Log

- Clamp in place aluminum stackable log system (stainless steel frame/still available)
- Patented Fast Clamp System allows for rapid deployment
- No loose parts
- Minimal tools/expertise required to deploy
- 6" high aluminum logs make for easy remote storage
- Can be deployed by no more than two staff

FB33 Expandable Flood Barrier

- Patented hand-crank expandable steel frame
- Easy to use
- Economical
- Lightweight—one person can deploy

FB11/22

Lightweight Liftout Flood Barrier
with inflatable seal

CG11FS

Bolt In Place Liftout Flood Barrier
with compression seal

CG22

Bolt in Place Windows/Louver Protection
with compression seal

FB44

Side Hinged Flood Gate with Flush Threshold
with inflatable seal

CG11HA

Side Hinged Flood Gate
with compression seal

CG3S

Sliding Flood Gate with Concealment Pocket
with compression or inflatable seal

FB55

Bottom Hinged "Flip-Up" Flood Gate
with inflatable seal

FB77

Hinged Watertight Door with Flush Threshold
with inflatable seal

D3C/D3DQA

Quick Acting Submarine Style Watertight Door
with compression seal

D5B

Sliding Watertight Door
with inflatable seal

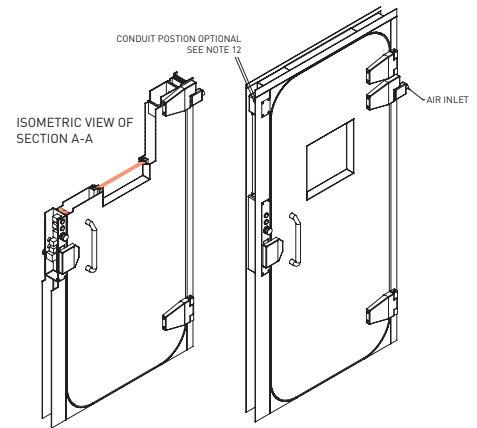

D3HA

Watertight Hatch
with compression seal

Bio4-X Airtight Door
Pneumatic seal for accessibility

- Configurable for BSL 4 and 3AG
- Flush threshold ideal for wheeled traffic and pedestrian flow
- Ideally suited for bio-hazard labs, pharmaceutical and industrial clean rooms, gastight enclosures and other controlled areas
- Double pneumatic seal provides redundant protection (single seal available for less critical applications)
- Electronic vestibule control synchronizing seals and electromagnetic locks
- Can be fabricated as impact resistant from either side

Note: These doors are available in several configurations; these pictures may not accurately resemble final product.

D4BQA Airtight Door
Compression seal for simplicity

- Configurable for BSL 4 and 3AG
- Highly engineered latching system provides for smooth, one-handed operation
- Ideally suited for bio-hazard labs, pharmaceutical and industrial clean rooms, gastight enclosures, water treatment and other controlled areas
- 2" floor sill required
- Can be fabricated as impact resistant from either side

Note: These doors are available in several configurations; these pictures may not accurately resemble final product.
