3. INSTALLATION

3.1 The installation of Johnsonite Vinyl Stair Nosings should not begin until the work of all other trades has been completed, especially overhead trades. Areas to receive stair nosings shall be clean, fully enclosed, weathertight, and maintained at a uniform temperature of at least 70°F for 24 hours before, during, and after the installation is completed. The stair nosings and adhesives shall be conditioned in the same manner. Stair steps shall be smooth, flat, permanently dry, clean and free of all foreign material, such as dust, paint, grease, oils, solvents, curing and hardening compounds, sealers, asphalt, and old adhesive residue. Stair Nosings may be installed on any smooth, dry interior step. Do not install on exterior steps subject to weather. Stair shape shall conform closely to stair nosing contour. An epoxy caulking nose filler shall be applied to ensure a tight fit and eliminate any open spaces between the step edge and stair nosing. Stair Nosings shall be trimmed to within 1/16” of the stringer to allow for expansion. Adhesives shall be applied per Johnsonite’s instructions. The stair nosing shall be bonded directly to the tread plate and riser portions of the stair step surfaces. Do not overlap the nosing over resilient riser material. Stair Nosings shall be rolled, with a J-hand roller, after installation, to ensure proper bonding.
