

How is Country Estate polyvinyl fencing different from other PVC fencing?

The evidence is overwhelming. Country Estate Fencing is totally superior to all other conventional white fencing materials. It is both cost effective and free from traditional maintenance. Exhaustive laboratory and field tests on farms and at residential homes nationwide, satisfied customers confirm the economical and durability claims we make. Country Estate fence owners receive the industry's best warranty, because it is a full 50 year non pro-rated warranty. All Country Estate Fence Products manufactured by Nebraska Plastics, Inc. conform to ASTM F964 .

Country Estate Fence is constructed exclusively of solid wall virgin polyvinyl compounds. Compare Country Estate Fence with its solid wall virgin polyvinyl compounds to any co-extruded fence product and it becomes obvious that competitors are making co-extruded products rather than virgin solid wall fencing for no other reason than to increase their profits. Buyer beware! It is not always easy to recognize a co-extruded product. Some of it is produced with a white interior and the outside layer (capstock) is so thin it is difficult to detect.

What kind of maintenance does my PVC fencing require?

Country Estate Products are free from traditional maintenance. This traditional white fencing is impervious to deterioration from moisture, temperature extremes, ultraviolet exposure and the wear and tear from time itself. You'll never have to scrape or paint your fence again, unlike any wood, metal or imitation polyvinyl fence. From the day your Country Estate Fence is installed, all traditional fence maintenance halts.

How does my PVC fence affect our environment?

PVC is an inert material that does not transmit pollutants into the ground or the air. The chemicals used to pressure treat wood fencing pollute the soil. Fumes from the paint applied to wood fences pollute the air. You do not have to cut down an oxygen producing tree to build a Country Estate Fence and with wood fencing, you may have to cut additional trees to replace and repair broken boards. Less fossil fuel is used to produce, install and maintain a Country Estate PVC fence than is used to grow a forest, protect it from insects, harvest and mill the trees into lumber, and paint and maintain a wood fence.

If recycling plastic materials is done wisely, it is a wonderful contribution to society. There are many disposable or semi-permanent items that utilize recycled materials appropriately. However, the quality of a "permanent" item such as Country Estate Fence should not be compromised. If the use of inferior materials causes a fence to be replaced before its time, the total fossil fuel fencing cost will be greater than the fossil fuels used in PVC fencing manufactured from pristine materials. Someday, when you no longer have a use for your Country Estate Fence, it may be dismantled and recycled.

Can you add more Country Estate Fence at a later date?

White Country Estate Fence will be just as white in ten, fifteen, twenty, or more years. Many Country Estate Fence projects are spread over a number of years. New fence can be added to an old project and both the old and the new will be the same.

Will Country Estate Fence enhance the value of my project?

A beautiful fence around any project enhances its value in many ways. It may provide privacy for an area or perhaps safety for a swimming pool. You may simply desire a backdrop to enhance landscaping. Country Estate Fencing gets all of those tasks done... with flair, and Country Estate Fence looks new all the time.

Does Country Estate offer their fence in any colors besides white?

Country Estate offers 3 colors: traditional white, almond, and gray. With that many to choose from, there is bound to be a color to match your residence.
