

Sliding & Rolling Closures & Grilles

Shutters

Mini-Shutters

Roll-Away Partitions

Counter Top Enclosures

*Since 1968 we've set the benchmark
for exceptional design quality, innovation and customer service.*

Dynaflair invented and developed the original sliding grille and closure concept which led to patents on these inventions in the early 1970's. These patented inventions led to continued product innovations and revolutionized the way architects approached the design of entrances and space partitioning. Today, these early developments serve as the foundation and a benchmark for sliding closures and grilles. Product innovation has been the hallmark of Dynaflair's product design and development.

The results of these on-going efforts have resulted in the most comprehensive product line, representing the widest choice of products to meet virtually any functional and design requirement in securing and partitioning space.

A closure or a grille prevents unauthorized access to secured space. Whether used as store entrances, store front perimeter protection; counter-top security enclosures such as pharmacy prescription counters; access control in such areas as closing off corridors, or any space separation and delineation, grilles and closures can be utilized in these and many other situations.

SLIDING CLOSURES & GRILLES

THE ELEGANCE FAMILY ►

This line of products utilizes the innovative hinging and folding system, developed and patented in 1974. With continuous improvements, it is today the best performing mechanism on the market.

This product line offers unmatched combination of security and visibility, coupled with extreme ease of operation, along with the fact that it is virtually maintenance free.

Appropriately named, the Elegance truly represents the best in its class.

The Elegance design is available with several different insert configurations, depending on your application:

- **Tempered glass inserts** offer maximum visibility and enhanced security with an aluminum frame.
- **Perforated inserts** provide 50% visibility and extra security.
- **Polycarbonate inserts** offer excellent visibility and security with less weight than tempered glass.
- **Solid aluminum inserts** completely secure the merchandise behind the closure to reduce the possibility of intrusion, by not displaying what exactly is behind the closure.
- **Open frame** provides great visibility and ease of operation at a more economical level.

SLIDING CLOSURES & GRILLES

THE CENTURION ▶

This design provides a good combination of security and visibility. Its sturdy checkerboard pattern is made of extruded aluminum vertical panels hinged to steel rods for extra strength. The exclusive scissor-link folding mechanism gives a crisp, open appearance from top to bottom. Available in 6", 9", 12" and 15" pattern.

THE S126 ▶

This model provides excellent visibility, but is limited to a suggested height of 10 feet. The lightweight unit is constructed of flat horizontal links connected by vertical aluminum and steel rods.

ROLLING CLOSURES & GRILLES

THE DYNAPLEX FAMILY ►

This line of rolling closures, utilizing several different insert options that are framed in Dynaflair's unique "Double C" hinge system.

- **Polycarbonate inserts** provide a virtually air tight curtain with maximum visibility and security
- **Perforated inserts** provide 50% visibility and air flow
- **Solid aluminum inserts** completely secure the merchandise behind the closure to reduce the possibility of intrusion, by not displaying what exactly is behind the closure

LEGIONAIRE ►

This open grid pattern design has excellent visibility and ventilation without compromising security. The distinctive bell-shaped bottom bar with metal inserts provides enhanced security. This bell shaped bottom is unique to Dynaflair and is available on all our over-head products.

COUNTER TOPS

All of the models manufactured by Dynaflair are available in counter top configurations. Counter top closures and grilles are ideal for a variety of uses, including pharmacies, kiosks, schools, hotels and health care facilities.

SHUTTERS

Fabricated from solid interlocking horizontal slats, this tough, aluminum shutter gives the highest degree of security and privacy when you need to completely conceal a space from unwanted intrusion.

MINI-SHUTTERS

These self-contained mini-shutter units are easy to install, requiring relatively little headroom for the coil and mechanical systems.

ROLL-AWAY PARTITIONS

Roll-Away moveable partitions are lockable barriers on wheels. These maximum six-foot-high partitions are designed to enclose freestanding retail kiosks and to control pedestrian movement. They can also divide or restrict access to large spaces where it is impractical to fasten a partition to a high overhead structure.
