- Evacuation Map & Egress Planning
- Sign Location Planning
- Message Schedule Programming
- Wayfinding Consultation
- Multilingual Translation & Certifications
- In House Manufacturing
- Installation
- After Care Maintenance / 1-2-3 Service Program

We Solve Your Problems While Saving You Money

Hackley Architectural Signage, Inc. has spent close to thirty years developing a reliable systematic process for planning, designing and producing interior and exterior Architectural Signage Systems for clients in the Healthcare, Corporate Office and Institutional Marketplace whether you have one facility or many across the country.

Our manufacturing and consulting services are focused on providing a one-stop solution for your Branding, Wayfinding, ADA and Regulatory Code Compliance needs, whether you have a custom design/build requirement or a need for a standard value based product line solution. We achieve the results you can depend on!

We Focus On Your Needs

The focus of our corporate mission is taking the burden and stress away from your management team and staff. We work hard to minimize your uncertainty about getting a Signage project completed, on time and under budget.

We Know The Codes and Regulations of the Healthcare Industry

Most corporate executives, facility managers, architects and builders are aware of the need to adhere to codes and regulations required by Federal, State and local agencies, with regard to Hospitals and Medical office building, but few understand the details and requirements specifically related to Signage and how costly they can be for not complying. Some of these include ADA (Americans with Disabilities Act), UBC (Uniform Building Code, IBC, OSHA, OSHPD, HIPPA, Safe Surrender, Patients' Rights and California titles 19, 22, 24 and Prop 65.

In some circumstances, not knowing about or adhering to even one regulation can cost you a delayed certificate of occupancy permit, fines or law suit(s) brought against your firm by disgruntled employees, dissatisfied customers, angry patients or vendors. The assumption that you are "in compliance" is certainly not worth risking the consequences of lost time, money, and reputation due to non compliant Signage.

We Have the Resources and Take Responsibility From Start To Finish

We take on the responsibility for getting the job done which aids every person on your project team from corporate facilitator to architect to builder. Hackley Architectural

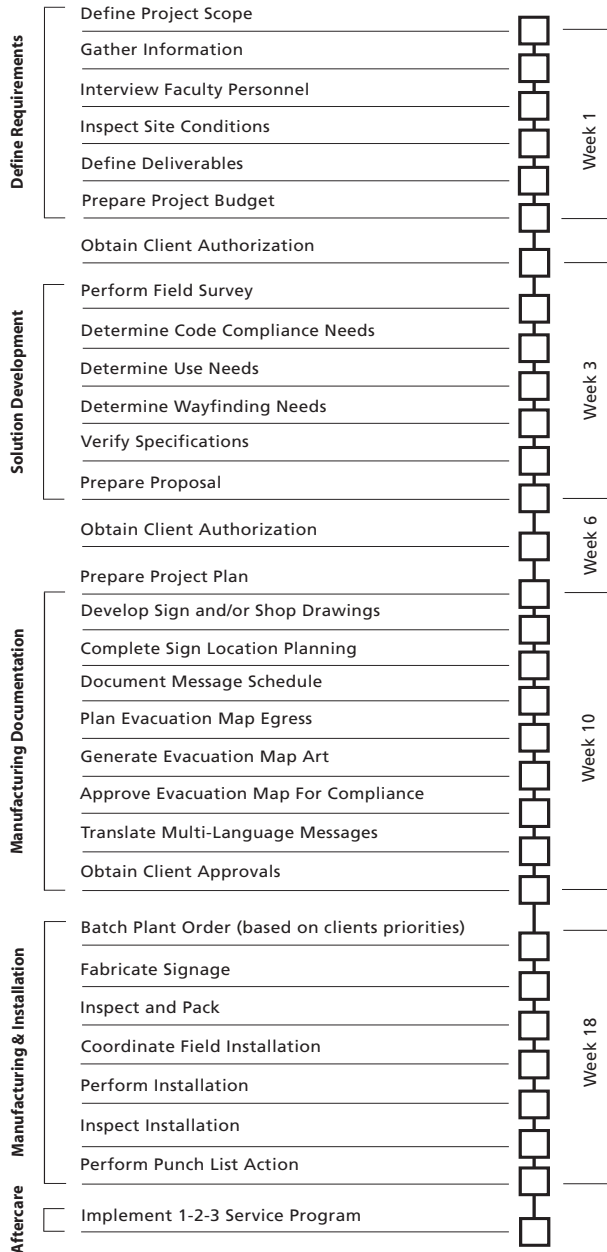

Signage is uniquely qualified because we boast a wide range of product lines and consulting services specifically designed to provide its customers exactly what they need for any industry, specification or budget. This includes a proprietary catalog of pre-designed solution sets from our value-based Optima Series(c) to our upscale Vanguard Series® to the ability to design, engineer and build "one off" custom applications that suits even the most demanding visual communication requirements.

We Design and Consult as Well as Build and Install

Our expert ability to assist in helping define your requirements with regard to design development, wayfinding, sign location planning and project management along with "in-house" custom manufacturing and installation is why we truly have the sole-source capability and "end in mind" philosophy to deliver the benefits you require.

PROJECT IMPLEMENTATION PROCESS

Our proven process (which we call the Hackley Value Chain process) has been designed to produce the best possible results in the fastest time possible while reducing stress and uncertainty on the part of your organization and staff. This time tested process is the core reason why we can complete your project, more effectively than any other company in our industry, while saving you valuable time and money.

Define Deliverables

Understanding the objectives and goals of your organization is monumental to the successful outcome of your project. This requires investing some time on your part and much effort from our team before an appropriate signage solution can be determined. This is done in what we call the Define Deliverables Phase. The purpose is to develop a statement of work (scope) and budget from which to work from in order to solve your problem. The process requires Hackley Architectural Signage (H.A.S.) to gather information about your corporate mission, uncover problems that your staff, vendors and/or patients may be having, collect materials e.g. artwork, floor plans and related documents and inspect the existing conditions of the physical building or buildings. Once these action steps are completed we can recommend deliverables in the form of manufactured products and consulting services and submit budget for time and money before continuing to the next step.

Solution Development

Putting together a strategy to accomplish the mission is the solution development stage. The purpose is to dig in and assess what is required to specifically meet the objectives of the project. It requires H.A.S. to look at all the elements of corporate branding, code compliance, wayfinding and information systems (in detail) to define specifications and a final proposal for your approval before beginning manufacturing and installation.

Manufacturing Documentation

Before we can actually start fabrication, we need to plan our work and coordinate the effort required to build and install your signage program. This is done by assessing the priorities and generating the documents required in producing the finished product. The devil is truly in the details. In this phase, we produce the shop drawings (if required), complete the final artwork for evacuation plans and orientation maps, work with your staff to determine message schedules, translate multilanguage copy (as required), and obtain any approvals from submittal supplied to you.

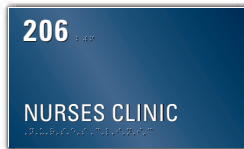

Manufacturing and Installation

Once the Manufacturing Documentation is complete, a plant order is submitted to production. Production then plans the work, procures the materials, determines task priorities, and assigns resources to complete the project. H.A.S. client services representatives and Project Managers work in concert with production to report the current status of your order and facilitate any changes in the project plan as required. As completion of the plant order nears, our field services team prepares for the installation by coordinating with your facilities personnel and verifying field conditions and readiness so that nothing is overlooked when our installers arrive.

Aftercare

Now that your facility has a beautiful brand new sign system, you will inevitably have on-going needs. As your organization grows, you may require additional signs, changes to existing signs, or some signs may have to be moved. Our 1-2-3 Service Program is designed to enable you to quickly and easily incorporate the alterations as they occur.
