 **MONDO**
RUNNING ON INNOVATION

“We put athletes at the heart of everything we do, including supplying them with the best possible sports equipment and services—from Mondo.”

Sebastian Coe

Chairman of the London 2012 Olympic Games Organizing Committee

Since 1948, a leader in the world of sports.

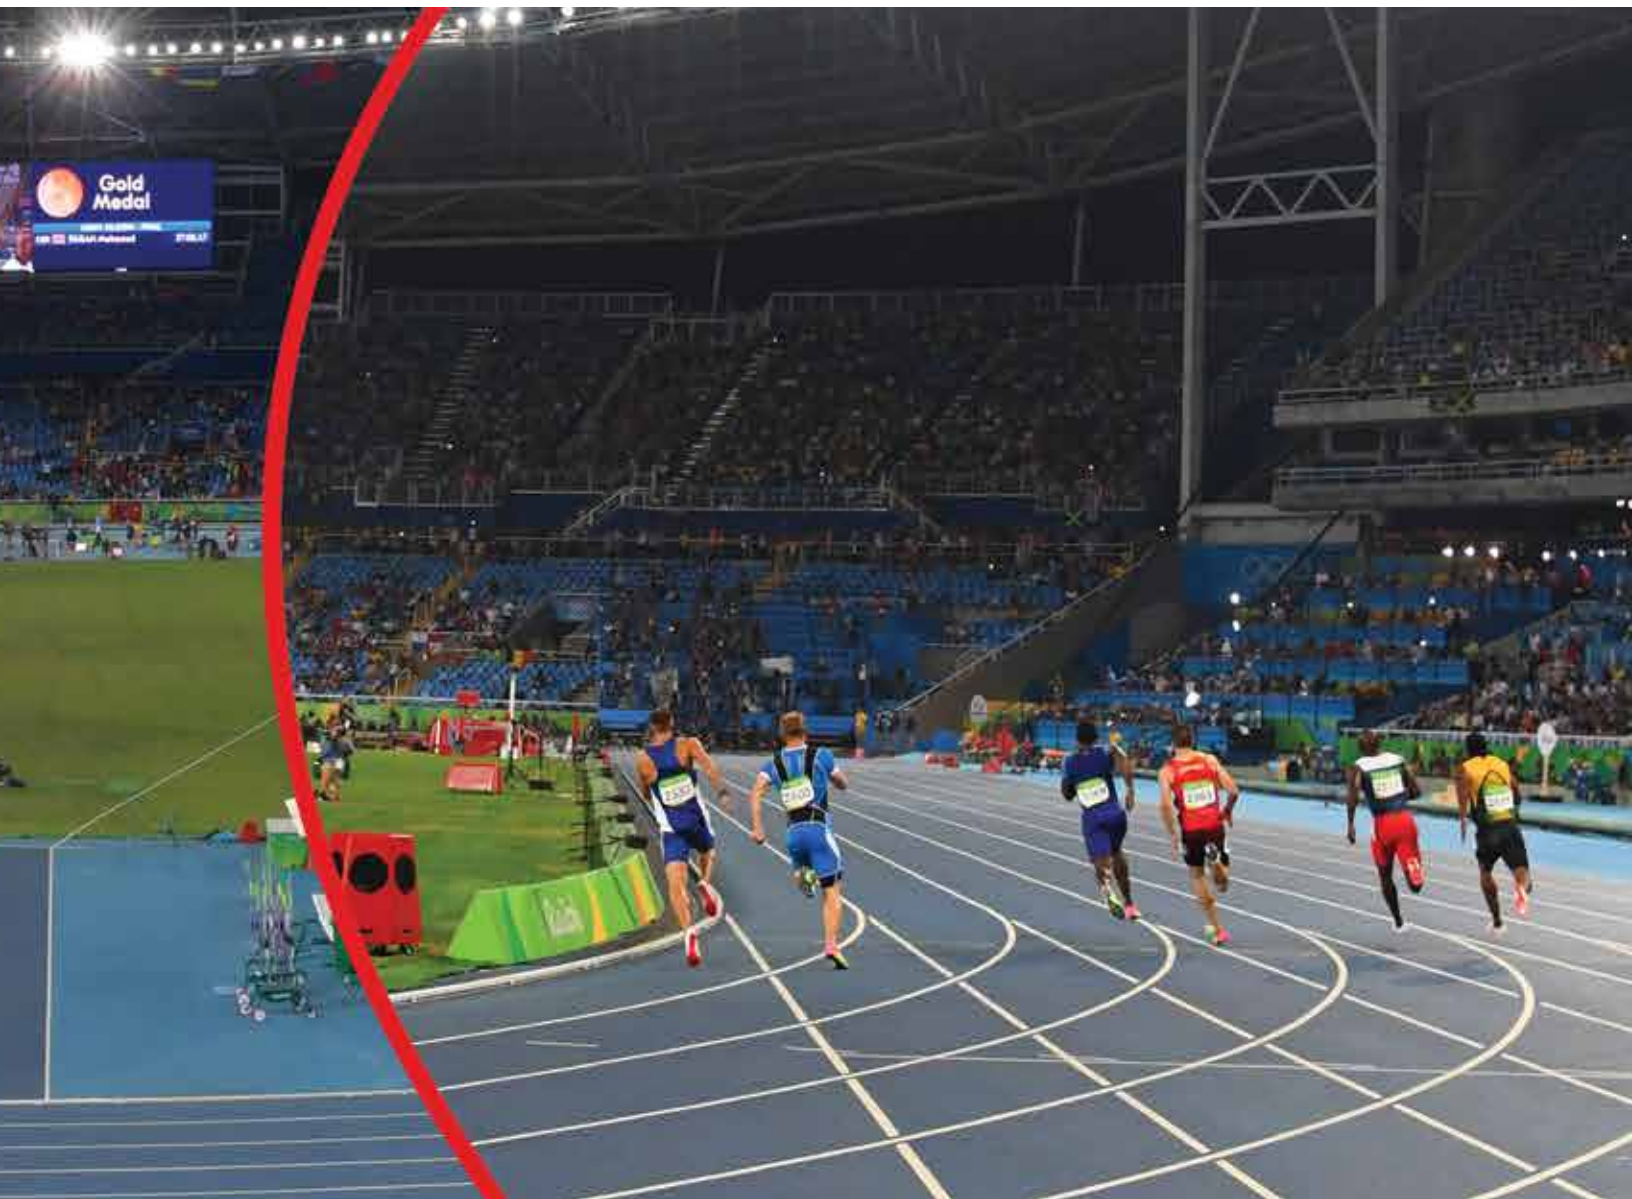

Mondo is the result of a family's passion. With 156 brands, more than 200 patents and over three decades of experience as an Official Supplier of the Olympic Games, Mondo symbolizes innovative solutions and athletic performance.

Investing in research and development.

Every year, Mondo invests a portion of its profits toward the study of innovative solutions in sports equipment and facilities. The company's research center collaborates closely with industry experts, research institutes, universities, coaches and athletes to develop a product range characterized by cutting-edge technology accompanied by personalized services.

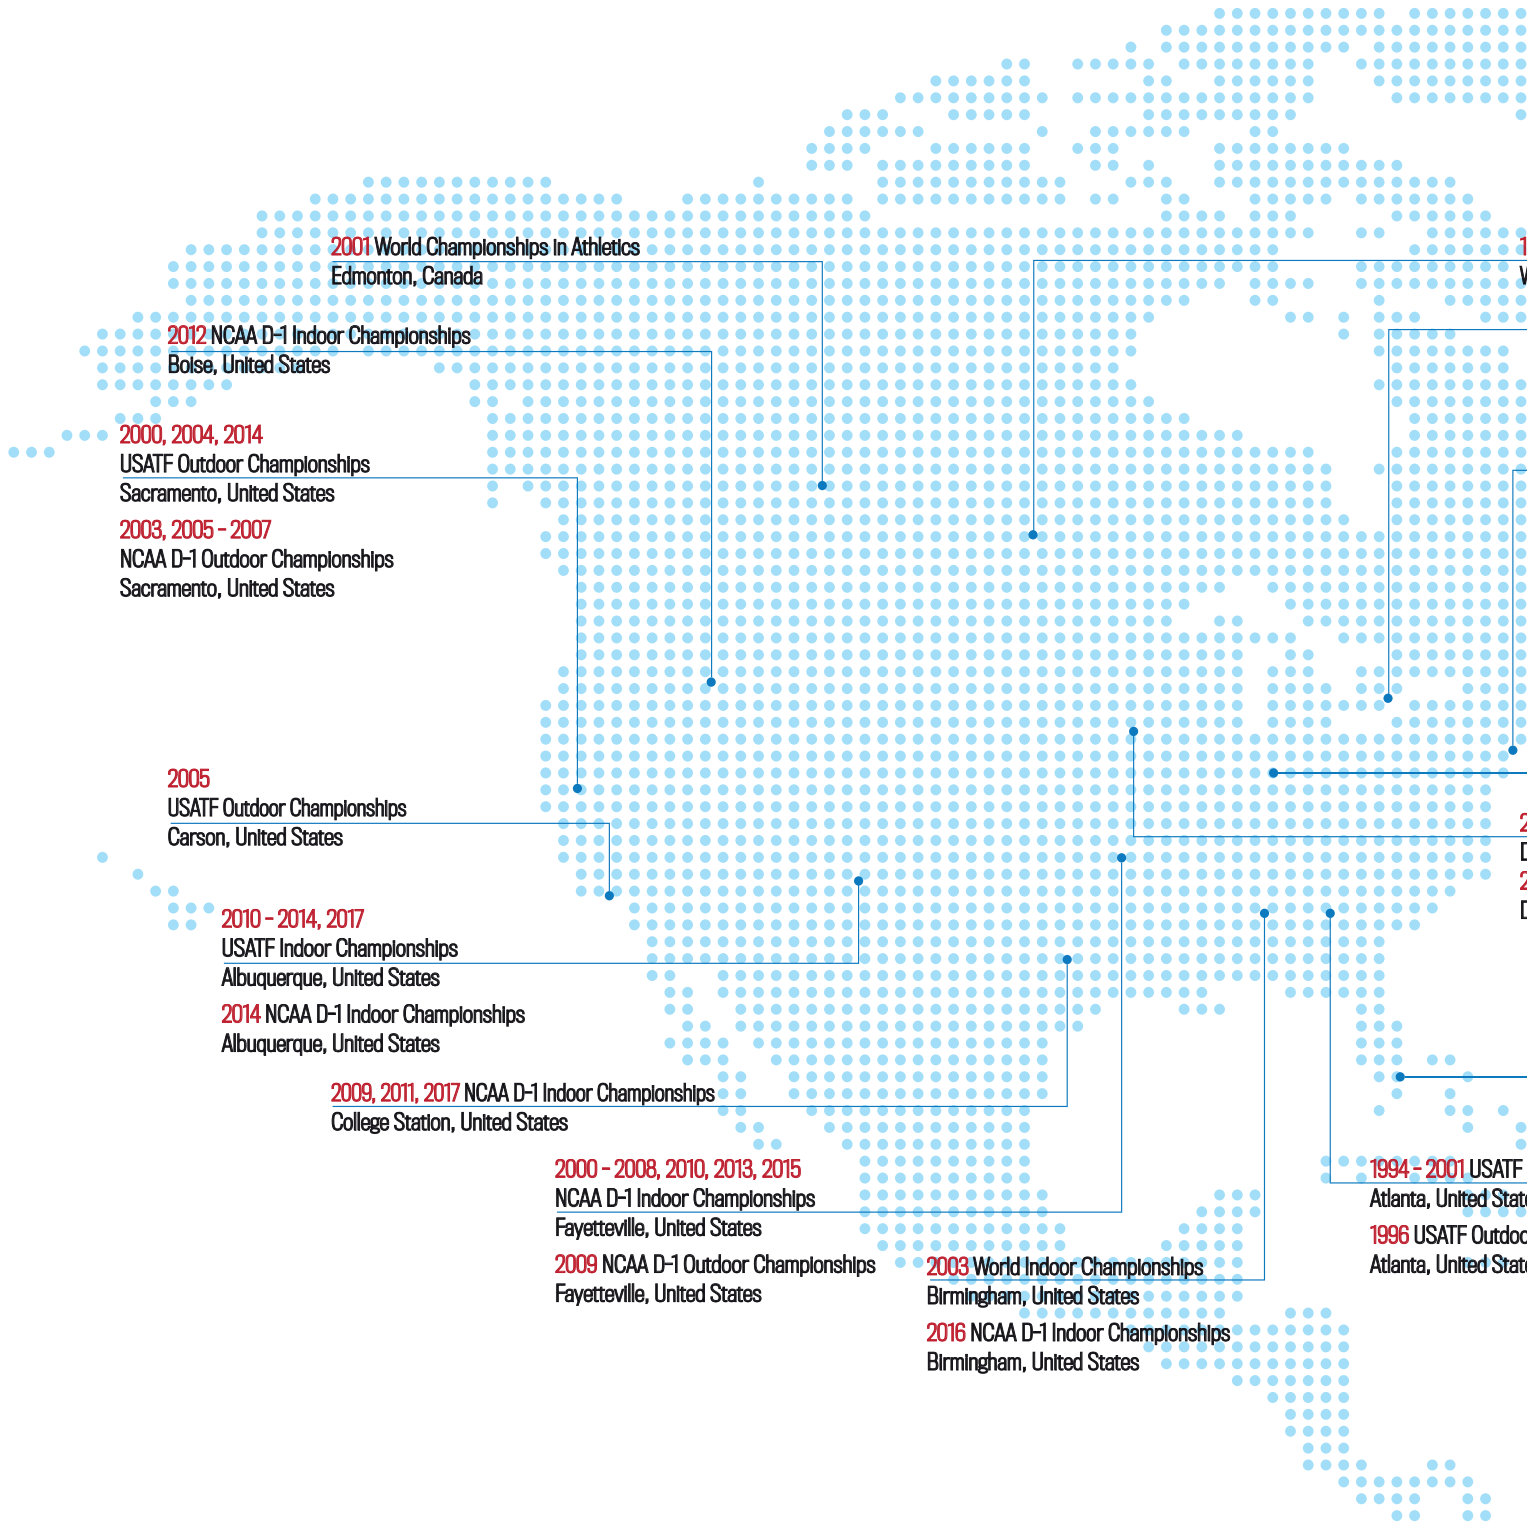

Caring for the environment in all that we do.

Mondo prides itself on being an environmentally friendly and health-conscious company. Strict controls on raw materials, quality control testing and performance reviews ensure consistent, durable and safe products. From their production, installation, use and disposal, Mondo products are safe for the environment and the athletes who use them.

“On behalf of the United States Olympic Committee, I wish to thank you for your valuable contribution to the extraordinary success of Team USA at the RIO 2016 Olympics, where we were successful in reaching our goals of winning the total medal count (121) and the gold medal count (46). Specifically, USA Track and Field had a very successful Olympics by earning 13 gold medals and 32 total medals. Having exclusive access to a truly world-class training facility installed by MONDO Italy at Escola Naval was a critical factor in the success of USA Track and Field, as evident by the positive feedback we received from Team USA athletes and coaches.”

Randall L. Wilber, Ph.D., FACSM
Senior Sport Physiologist

THE ADVANTAGES OF A MONDO

SEAMLESS CONSTRUCTION

Mondo was the first company to innovatively vulcanize sports surfaces, introducing prefabricated single-layer products with dual durometer construction with targeted properties. The company's vulcanization process permanently amalgamates individual layers, using high heat and pressure; the product will never separate, and its biomechanical and physical properties will be consistent. A uniform dynamic response gives athletes complete control over stride length.

UNIFORM BIOMECHANICAL RESPONSE

CONSISTENCY

TRACK/FOOT

FORCE REDUCTION

As the athlete's foot hits the surface, the track deflects, absorbing kinetic energy and ensuring the utmost in comfort and safety.

LATERAL SUPPORT

The lateral deformation of the honeycomb cells helps reduce the amount of time needed to roll the foot and offers continuous, optimal support.

TRACTION

Traction is improved such that spikes need not penetrate the surface. Compression spikes cause maximum deflection which boosts energy return.

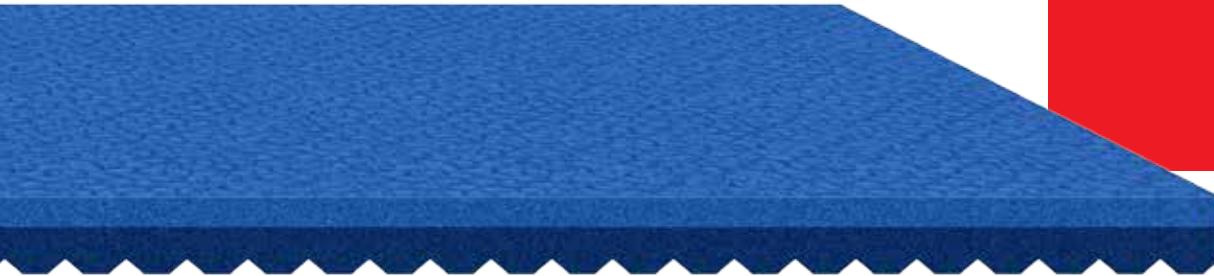

PREFABRICATED TRACK

LOW
VOC
EMISSIONS

More than 3,000 indoor and outdoor Mondo tracks, with over 20 of them being hydraulically variable, have been installed on all five continents and under a multitude of climatic conditions.

Athletes have set more than 260 world records on Mondo tracks.

INTERACTION

LAUNCH EFFECT

When the foot leaves the surface, the track acts like a catapult, releasing the greatest portion of stored energy and launching the athlete forward for greater propulsion and speed.

NEW MONDOTRACK/WS

OLYMPIC CHOICE FOR SPEED AND DISTANCE

- Surface used for the 2016 Rio Olympic Games benefits sprinter, hurdlers, long- and triple-jumpers, pole-vaulters and high-jumpers
- Embossed for excellent control over stride length.
- Unique hexagonal backing provides improved comfort, safety and performance. Diamond Air-Cell Patented Technology delivers responsive cushioning, energy storage and return. As the athlete's foot impacts the surface, air-filled cells compress, absorbing force and converting kinetic into stored energy. As the foot leaves the surface, cells spring back to their original shape, projecting the athlete up and forward. The design also helps the athlete's foot roll from the 5th to 1st metatarsus with continuous, optimal support.

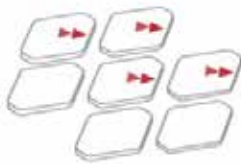

ELASTICITY AND UNIFORMITY

- 2-Phase Vulcanization™ process for dynamic elasticity and consistent response
- Superb wet and dry grip with 3D Omni-Directional Tessellation

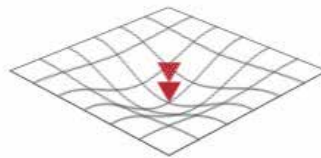

GREEN AND SUSTAINABLE

- GREENGUARD GOLD certified for better indoor air quality
- Granular-free for healthy waterways
- Heavy metal free and will not leach into the environment
- Excellent bacterial, microbial and fungal resistance properties
- Contributes toward LEED points
- 100% recyclable

SUPER X 720

ENGINEERED FOR SPEED AND COMFORT

- Super X 720 provides the optimal blend of energy return, comfort, safety and durability for both competition and training activities.
- Strong vulcanized rubber for optimum traction
- Unique textured bottom layer generates a cushion of air for extreme comfort and allows swifter transitions as the foot rolls from the 5th to 1st metatarsus
- Reduces fatigue and foot trauma by absorbing shock both vertically and horizontally
- Designed to channel water away for high performance in all conditions

STRONG AND SEAMLESS

Super X 720 is a prefabricated synthetic rubber track surface composed of two

different layers vulcanized together. Mondo's renowned vulcanization process permanently binds the layers creating a strong molecular bond and a seamless piece of material that will not separate. It is pre-manufactured in a controlled factory environment guaranteeing uniform thickness and technical characteristics over the entire surface of the track. This gives athletes control over stride length, running rhythm and balance, so they get the most out of training sessions and can feel confident when competing.

GREEN AND SUSTAINABLE

- GREENGUARD GOLD-certified for better indoor air quality
- Granular-free for healthy waterways
- Heavy metals-free and will not leach into the environment
- Excellent bacterial, microbial and fungal resistance properties
- Contributes toward LEED points
- 100% recyclable

SUPER X PERFORMANCE

PERFECT FOR PARKS AND SCHOOLS

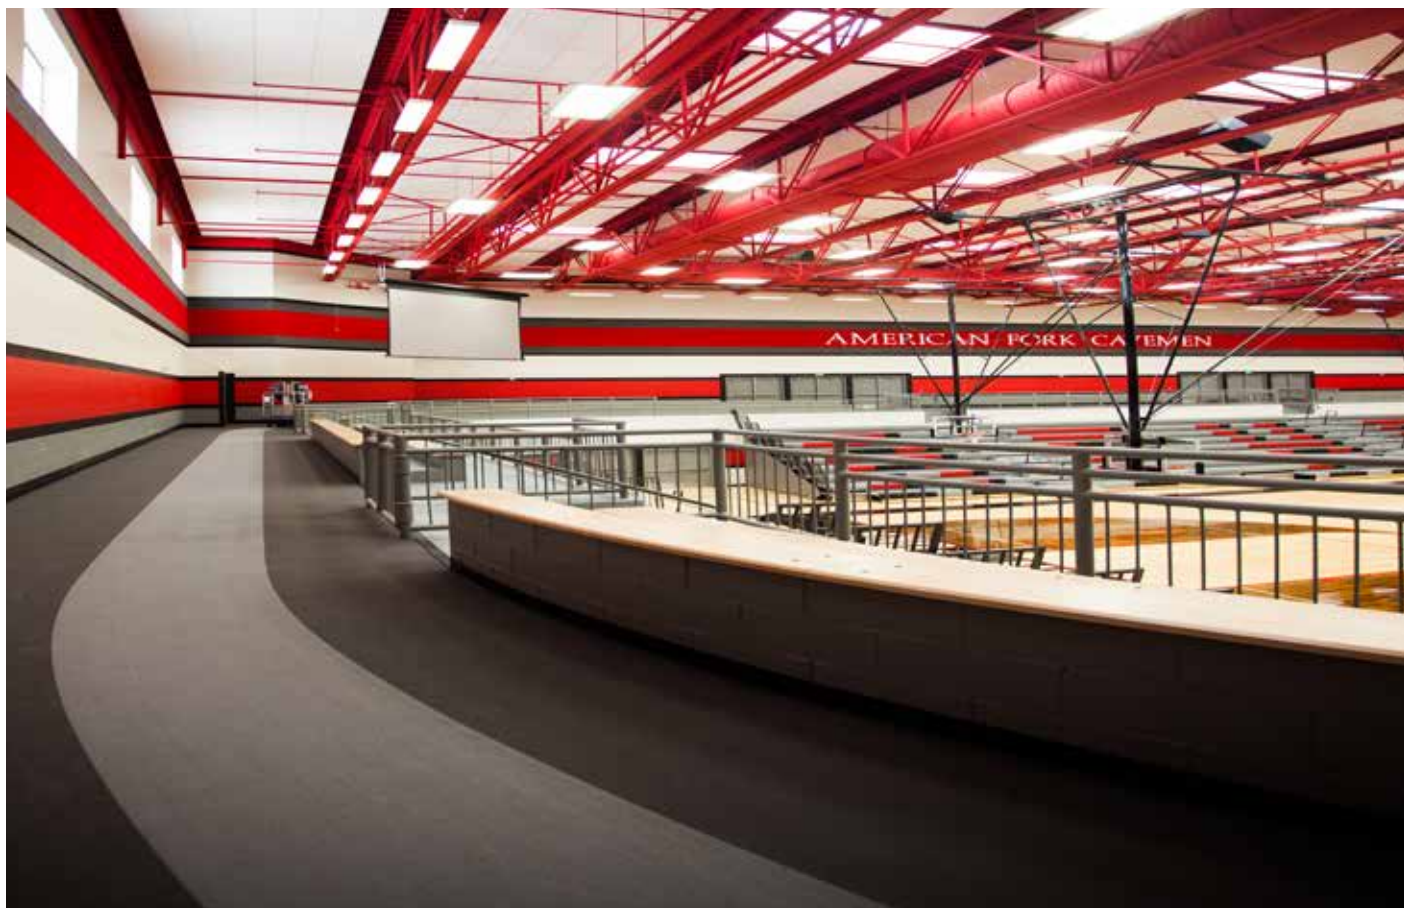

- Highly durable; withstands static and rolling loads
- Embossed for superior traction indoors and outdoors
- Shock absorption layer for safety and comfort
- Stain resistant; no specialized maintenance needed
- Non-slip surface for ease in maneuvering wheelchairs
- Designed to channel water away for high performance in all conditions
- Protects against climate changes and extreme weather

STRONG AND SEAMLESS

Super X Performance is Mondo's legendary prefabricated vulcanized rubber track surface with the highly acclaimed top layer and waffle backing. Mondo's proprietary equipment and vulcanization process ensure that biomechanical and physical properties stay consistent over the product's long lifespan.

SPORTFLEX M

IDEAL MULTIPURPOSE SURFACE

- The ideal surface for multiple sport activities such as basketball, volleyball, badminton, baseball and tennis
- Top layer has the ideal coefficient of friction, reducing knee, ankle and hip injuries during pivots and rotations
- Ideal for both indoor and outdoor applications, and all sports
- Withstands high traffic, static and heavy rolling loads
- Stain-resistant and free of surface coatings and loose granules that might compromise traction and make it difficult to clean; no specialized maintenance needed

STRONG AND SEAMLESS

Sportflex M is a prefabricated synthetic rubber track surface, composed of two different layers vulcanized together. Mondo's proprietary equipment and vulcanization process ensure that biomechanical and physical properties will remain consistent for uniform performance over time.

GREEN AND SUSTAINABLE

BANKED & HYDRAULIC TRACKS

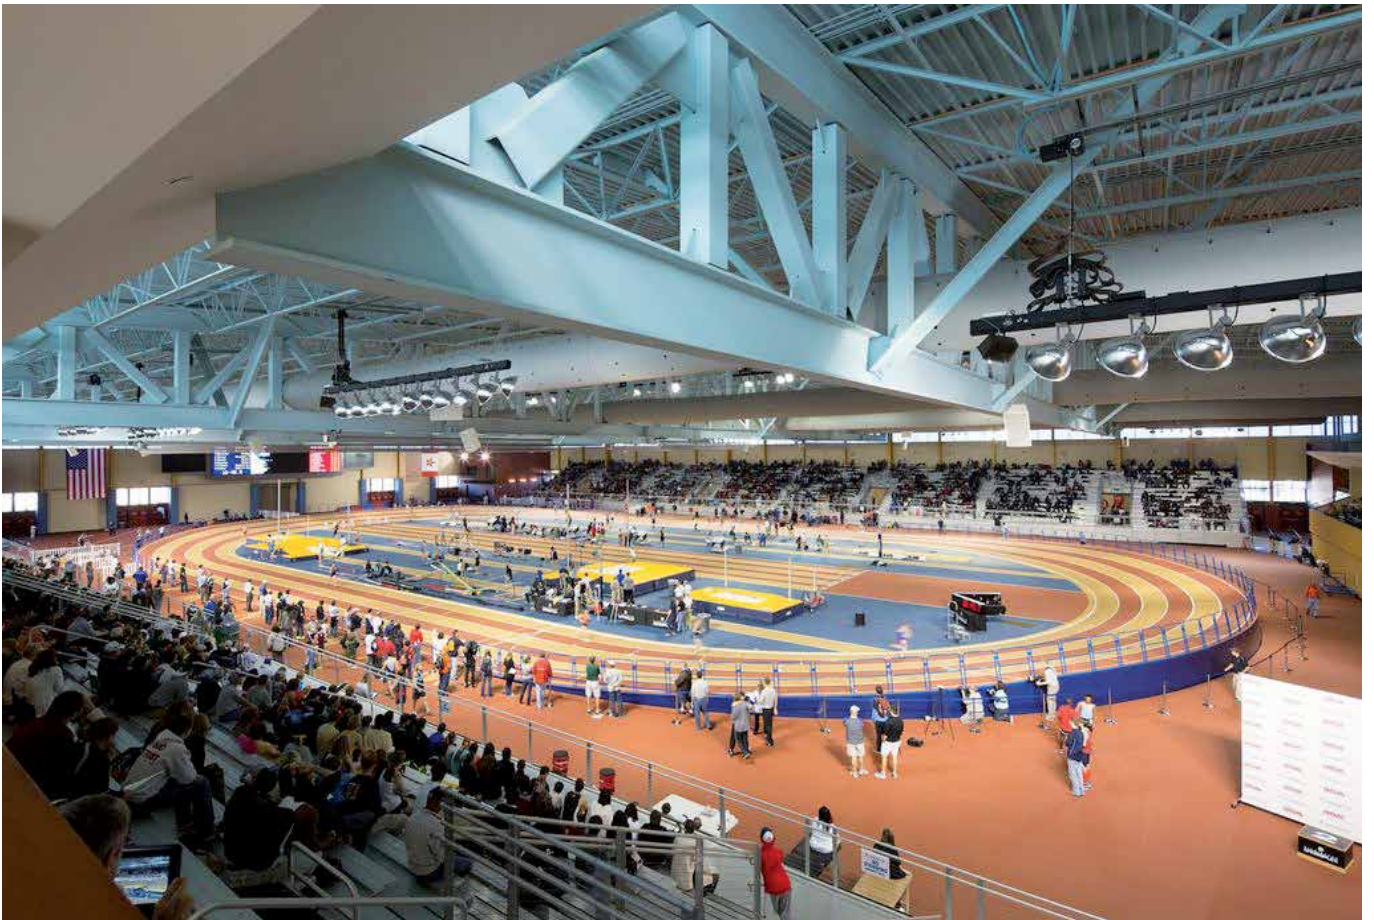

EXPERTS IN BANKED AND HYDRAULIC TRACKS

In 1988, Mondo introduced the hydraulic track system which raises and lowers in just minutes. Today, the company makes the world's only hydraulically operated variable banking 200-meter indoor competition track system. Mondo has been exclusively used at all world, national and conference championships that were held on hydraulic banked indoor multi-purpose tracks.

CUSTOMIZABLE, CONVENIENT AND VERSATILE

- Customized indoor banked tracks suit varied building limitations, so athletes can safely and fairly achieve their top performances in any competitive environment; runners gain smooth passage from the straightaways to the bends without slowing down
- When the hydraulic system lowers the curved sections, the track is flush with the surrounding surfaces and can be used for other activities

- Unlike concrete structures, Mondo's modular permanent banked tracks can be quickly assembled and disassembled
- Ingenious claw locking mechanism clamps the modular track frame in place with constant force and accuracy from panel to panel, installation to installation
- Mondo's hydraulically operated variable banking track can be conveniently raised to the required height with the push of a button. When lowered, it's flush with its surroundings and the entire sport floor can be used in other ways. The hydraulic tracks can be set at any position between flat and fully raised, so they can be used by athletes of all ability levels and for any activity.
