Rough Openings for multiple, same-sized Single Hungs can be calculated by multiplying the single unit rough opening width by the number of units.

Note: When ordering multiple units, you must order the individual windows and specify mullled. You can't order by overall rough opening size.

SINGLE HUNG

Single Hung - Wood Stock Sizes

Wood Size	Stock Sizes	Single Unit Dimension	Rough Opening Single	Rough Opening Twins	Rough Opening Triples

* Can be ordered as a continuous head and sill unit

Rough Openings for multiple, same-sized Single Hungs can be calculated by multiplying the single unit rough opening width by the number of units.

Note: When ordering multiple units, you must order the individual windows and specify mullid. You can't order by overall rough opening size.

Rough Openings for multiple, same-sized Pictures can be calculated by multiplying the single unit rough opening width by the number of units.

Note: When ordering multiple units, you must order the individual windows and specify mulled. You can't order by overall rough opening size.

* Can be ordered as a continuous head and sill unit

Rough Openings for multiple, same-sized Single Hungs can be calculated by multiplying the single unit rough opening width by the number of units.

Note: When ordering multiple units, you must order the individual windows and specify muller. You can't order by overall rough opening size.

* Can be ordered as a continuous head and sill unit

Rough Openings for multiple, same-sized Single Hungs can be calculated by multiplying the single unit rough opening width by the number of units.

Note: When ordering multiple units, you must order the individual windows and specify mullled. You can't order by overall rough opening size.

TEST REPORTS ARE AVAILABLE UPON REQUEST

All units tested in accordance with AAMA/NWDA 101/I.S.2-97, and include a welded corner test, for which all units either met or exceeded the standards, and a deglazing test, for which all units either met or exceeded the standards.

1) Sizes are certified up to and including the sizes listed.

2) Air infiltration is based upon static pressure of 1.57 psf (25 mph). Air infiltration shall not exceed 0.3 standard cubic feet per minute (scfm) per square foot.

3) Operating force listed is an average of the forces required to open and close the unit. The maximum allowable pound force is 30 lbf for vertical sliders and 20 lbf for horizontal sliders.

4) The minimum water resistance is 2.86 psf for an entry level R15 water rating, 3.75 psf for an entry level LC25 water rating, and 4.50 psf for an entry level C30 water rating.

5) The minimum structural test pressure is 22.5 psf for an entry level R15 structural rating, 37.5 psf for an entry level LC25 structural rating, and 45.0 psf for an entry level C30 structural rating.

NOTES:

SPECIAL MANUFACTURING REQUIREMENTS (FOR EXAMPLE: REINFORCEMENT STRENGTH, GLASS STRENGTH, ETC.) MAY BE NECESSARY TO MEET THE DESIGN PRESSURE LISTED. PLEASE SPECIFY DESIGN PRESSURE REQUIRED WHERE APPLICABLE.

PLEASE CONSULT YOUR SIMONTON REPRESENTATIVE FOR AVAILABILITY OF SIZES. FACTORS SUCH AS HARDWARE RELIABILITY, SHIPPING, CONSISTENCY IN OPERATING FORCE AND SECURING THE UNIT PROPERLY MAY LIMIT THE UNIT SIZE

1 - Low E (HC) emissivity coating = 0.154; Low E (SC) emissivity = 0.04.

2 - Center of glass information based on double-strength, dual-pane glass.

3 - All center of glass calculations done using Lawrence Berkeley National Laboratory's Window 4.1 thermal analysis program and NFRC approved spectral data and environmental conditions.

4 - All total unit U-Factors tested in accordance to NFRC 100.

5 - All total unit Visible Transmittance and Solar Heat Gain Coefficient tested in accordance to NFRC 200.

6 - UV Block based on UV transmissions from 300 to 380 nm.

7 - The relative humidity percentage measurement applies only to the center of glass. Condensation will form more quickly at the edges of the glass.
